**Style Definition:** Numbered List

## IPP 3D Printing Extensions 0.1 (3D)

Status: Interim

**Deleted:** Initial

Abstract: This white paper defines an extension to the Internet Printing Protocol that supports printing of physical objects by Additive Manufacturing devices such as 3D printers.

This document is a White Paper. For a definition of a "White Paper", see:

## 136 1. Introduction

137 This white paper defines an extension to the Internet Printing Protocol (IPP) that supports  
138 printing of physical objects by Additive Manufacturing devices such as three-dimensional  
139 (3D) printers. The attributes and values defined in this document have been prototyped  
140 using the CUPS software [CUPS].

141 The primary focus of this document is on popular Fused Deposition Modeling (FDM)  
142 devices that melt and extrude ABS and PLA filaments in layers to produce a physical, 3D  
143 object. However, the same attributes can be used for other types of 3D printers that use  
144 different methods and materials such as Laser Sintering of powdered materials and curing  
145 of liquids using ultraviolet light.

146 [This document also addresses common Cloud-based issues by extending the IPP Shared](#)  
147 [Infrastructure Extensions \[PWG5100.18\], although how such services are provisioned or](#)  
148 [managed is out of scope.](#)

149 This document does not address the larger issue of choosing a common Object Definition  
150 Language (ODL) for interoperability, however there are suggested MIME media type  
151 names listed in section [7](#) for several formats in common use [as well as strategies for](#)  
152 [mapping material definitions in the Job Ticket to the ODL content.](#)

## 153 2. Terminology

### 154 2.1 Terms Used in This Document

155 *Additive Manufacturing:* A 3D printing process where material is progressively added to  
156 produce the final output.

157 *Binder Jetting:* A 3D printing process that uses a liquid binder that is jetted to fuse layers of  
158 powdered materials.

159 *Digital Light Processing:* A 3D printing process that uses light with a negative image to  
160 selectively cure layers of a liquid material.

161 *Fused Deposition Modeling:* A 3D printing process that extrudes a molten material to draw  
162 layers.

163 *Laser Sintering:* A 3D printing process that uses a laser to melt and fuse layers of  
164 powdered materials.

165 *Material Jetting:* A 3D printing process that jets the actual build materials in liquid or molten  
166 state to produce layers.

169 *Selective Deposition Lamination*: A 3D printing process that laminates cut sheets of  
170 material.

171 *Stereo Lithography*: A 3D printing process that uses a laser to cure and fuse layers of  
172 liquid materials.

173 *Subtractive Manufacturing*: A 3D printing process where material is progressively removed  
174 to produce the final output.

Deleted: *ti*

## 175 **2.2 Acronyms and Organizations**

176 CNC: Computer Numerical Control

177 DLP: Digital Light Processing

178 FDM: Fused Deposition Modeling

179 IANA: Internet Assigned Numbers Authority, <http://www.iana.org/>

180 IETF: Internet Engineering Task Force, <http://www.ietf.org/>

181 ISO: International Organization for Standardization, <http://www.iso.org/>

182 PWG: Printer Working Group, <http://www.pwg.org/>

183 SD: SD Card Association, <http://www.sdcard.org/>

184 SDL: Selective Deposition Lamination

185 SL: Stereo Lithography

186 USB: Universal Serial Bus, <http://www.usb.org/>

187

### 189 3. Rationale for IPP 3D Printing Extensions

190 Existing specifications define the following:

- 191 1. IPP/2.0 Second Edition [PWG5100.12] defines version 2.0, 2.1, and 2.2 of the  
192 Internet Printing Protocol which defines a standard operating and data model,  
193 interface protocol, and extension mechanism to support traditional Printers;
- 194 2. IPP Everywhere [PWG5100.14] defines a profile of existing IPP specifications,  
195 standard Job Template attributes, and standard document formats;
- 196 3. [IPP Shared Infrastructure Extensions \(INFRA\) \[PWG5100.18\]](#) defines an  
197 interface for printing through shared services based in infrastructure such as  
198 Cloud servers;
- 199 4. The Standard Specification for Additive Manufacturing File Format (AMF)  
200 Version 1.1 [ISO52915] defines an XML schema and file format for describing  
201 3D objects with one or more materials;
- 202 5. The SLC File Specification [STLFORMAT] defines a file format ([commonly](#)  
203 [called "STL files"](#)) for describing 3D object with a single material;
- 204 6. ....

205 Therefore, this IPP 3D Printing Extensions (3D) document should define IPP attributes,  
206 values, and operations needed to support printing of 3D objects, status monitoring of 3D  
207 printers and print jobs, and configuration of 3D printer characteristics and capabilities.

**Deleted:** The Interchangeable Variable Block Data Format  
for Positioning, Contouring, and Contouring/Positioning  
Numerically Controlled Machines [RS274D] defines the "G-  
code" format that is commonly used by 3D printers; a ... [5]

#### 208 3.1 Use Cases

##### 209 3.1.1 Print a 3D Object

210 Jane is viewing a 3D object and wishes to print it. After initiating a print action, she selects  
211 a 3D printer on the network, specifies material and print settings, and submits the object  
212 for printing.

##### 213 [3.1.2 Print a 3D Object Using Loaded Materials](#)

214 Jane is viewing a 3D object and wishes to print it. After initiating a print action, she selects  
215 a 3D printer on the network that has the material(s) she wishes to use, specifies additional  
216 print settings, and submits the object for printing.

##### 217 [3.1.3 Print a 3D Object with Multiple Materials](#)

218 Jane wants to print a multi-material object on a single-material Printer. Jane uses software  
219 on her Client device to create Document data that instructs the Printer to pause printing  
220 and provide status information at specific layers so that she can change materials at the  
221 Printer and resume printing with the new material.

227 **3.1.4 View a 3D Object During Printing**

228 Jane has submitted a 3D print Job that will take 4 hours to complete. She can visually  
229 monitor the progress of the Job through a web page provided by the Printer.

230 **3.2 Exceptions**

231 **3.2.1 Clogged Extruder**

232 While printing a 3D object, the extruder becomes clogged. The printer stops printing and  
233 sets the corresponding state reason to allow Jane's Client device to discover the issue and  
234 display an appropriate alert.

235 **3.2.2 Extruder Temperature Out of Range**

236 While printing a 3D object, the extruder temperature goes out of range for the material  
237 being printed. The printer pauses printing until the temperature stabilizes and sets the  
238 corresponding state reason to allow Jane's Client device to discover the issue and display  
239 an appropriate alert.

240 **3.2.3 Extruder Head Movement Issues**

241 While printing a 3D object, the extruder head movement becomes irregular. The Printer  
242 stops printing and sets the corresponding state reason to allow Jane's Client device to  
243 discover the issue and display an appropriate alert.

244 **3.2.4 Filament Feed Jam**

245 While printing a 3D object, the filament jams and cannot be fed into the extruder. The  
246 printer stops printing and sets the corresponding state reason to allow Jane's Client device  
247 to discover the issue and display an appropriate alert.

248 **3.2.5 Filament Feed Skip**

249 While printing a 3D object, the filament extrusion rate is insufficient to maintain proper  
250 printing. The printer stops printing and sets the corresponding state reason to allow Jane's  
251 Client device to discover the issue and display an appropriate alert.

252 **3.2.6 Material Empty**

253 While printing a 3D object, the printer runs out of the printing material. The printer pauses  
254 printing until more material is loaded and sets the corresponding state reason to allow  
255 Jane's Client device to discover the issue and display an appropriate alert.

**256 3.2.7 Material Adhesion Issues**

257 While printing a 3D object, the printed object releases from the build platform or the current  
258 layer is not adhering to the previous one. The printer stops printing and sets the  
259 corresponding state reason to allow Jane's Client device to discover the issue and display  
260 an appropriate alert.

**261 3.2.8 Print Bed Temperature Out of Range**

262 While printing a 3D object, the print bed temperature goes out of the requested range. The  
263 printer pauses printing until the temperature stabilizes and sets the corresponding state  
264 reason to allow Jane's Client device to discover the issue and display an appropriate alert.

**265 3.2.9 Print Bed Not Clear**

266 When starting to print a 3D object, the Printer detects that the build platform is not  
267 empty/clear. The Printer stops printing and sets the corresponding state reason to allow  
268 Jane's Client device to discover the issue and display an appropriate alert. The Printer  
269 starts printing once the build platform is cleared.

**270 3.3 Out of Scope**

271 The following are considered out of scope for this document:

- 272 1. Definition of new file formats; and
- 273 2. Support for Subtractive Manufacturing technologies such as CNC milling  
274 machines.

**275 3.4 Design Requirements**

276 The design requirements for this document are:

- 277 1. Define attributes and values to describe supported and loaded (ready) materials  
278 used for FDM; and
- 279 2. Define attributes and values to describe FDM printer capabilities and state

280 The design recommendations for this document are:

- 281 1. Support 3D printing technologies other than FDM

## 283 4. Technical Solutions/Approaches

284 Current 3D printers offer limited connectivity and status monitoring capabilities. Many  
 285 printers simply read printer-ready, files from SD memory cards, with all interaction and  
 286 status monitoring happening at the printer's console.

**Deleted:** print

**Deleted:** G-code

287 Makerbot Industries uses a proprietary protocol and file format that generalizes some  
 288 aspects of the interface between a host device and 3D printer. However, this solution is  
 289 highly specific to FDM printing and does not offer any spooling or security functionality.

**Deleted:** [S3G]

**Deleted:** , and this interface does offer an improved printing experience from the host device

290 Various other proprietary protocols and interfaces are also in use, typically based on the  
 291 USB serial protocol class for direct connection to a host device. And there are a number of  
 292 Cloud-based solutions emerging that utilize a proxy device that communicates with the  
 293 Cloud and 3D printer.

294 Given that the 3D printing industry and technologies are still undergoing a great deal of  
 295 change and development, certain aspects of 3D printing may be difficult or infeasible to  
 296 standardize. However, a stable, reliable, and secure interface between host device (IPP  
 297 Client) and 3D printer (IPP Printer) can be defined today in a way that allows for future  
 298 changes to be incorporated without difficulty.

**Deleted:** d

### 299 4.1 High-Level Model

300 IPP [RFC2911] and the IETF Printer MIB [RFC3805] already define a comprehensive  
 301 model for the operation and data elements of a typical 2D printer. The IPP Job processing  
 302 model matches how 3D printers process Jobs and Documents. However, more types of  
 303 subunits are used in a 3D printer, requiring additions to the model and state values. Table  
 304 1 lists the subunits of 3D printers for different technologies.

305 **Table 1 - 3D Printer Subunits**

Subunit	Technology
Build Platforms	All
Cameras	All
Cutters	SDL
Doors	All
Fans	FDM
Input Trays	SDL
Lamps	DLP
Lasers	Laser Sintering, SL
Marker Supplies	All
Markers (or Extruders)	Many
Media Path	SDL
Motors	All
Reservoirs	DLP, Laser Sintering, SL

**312 4.1.1 Build Platforms**

313 Build Platforms hold the printed object. The platform typically moves up or down during  
314 printing as layers are applied, although in some cases it moves along all three axis.

**315 4.1.2 Cameras**

316 Cameras typically show the Build Platforms, offering a visual progress/status reporting for  
317 remote users.

**318 4.1.3 Cutters**

319 Cutters are used to trim support material on printed objects and/or remove regions of  
320 media that are not part of the final printed object.

**321 4.1.4 Fans**

322 Fans are used to cool printed material and maintain proper extruder and material  
323 temperatures.

**324 4.1.5 Lamps**

325 Lamps are used by DLP printers to provide an ultraviolet light source for curing the liquid  
326 material while printing a layer. Lamps are also used to illuminate the Build Platforms.

**327 4.1.6 Lasers**

328 Lasers are used by Laser Sintering and Stereo Lithography (SL) printers to fuse powdered  
329 material or cure liquid material while printing a layer.

**330 4.1.7 Markers (or Extruders)**

331 Markers can be traditional subunits where an image is printed on sheets of paper (SDL),  
332 extruders that place material onto the Build Platform or previous layer, or projectors that  
333 display an inverse image on the surface of a liquid material (DLP).

**334 4.1.8 Motors**

335 Motors are used to move the Build Platforms and (in some cases) move the Markers.

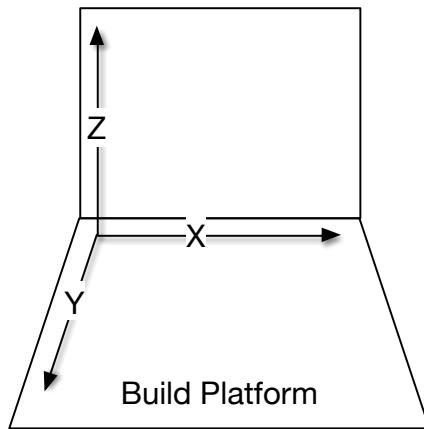

**336 4.1.9 Reservoirs**

337 Reservoirs hold liquid or powdered material used to create the printed object.

### 338 **4.2 Coordinate System**

339 3D printers operate in three dimensions and thus have three axis of movement. [Figure 1](#)  
340 [shows the coordinate system where the X axis represents the width of the object, the Y](#)  
341 [axis represents the depth of the object, and the Z axis represents the height of the object.](#)

**Deleted:** The

342  
343 [Figure 1 - Typical Build Platform Coordinate System](#)

344 [Filament usage by extrusion Printers is sometimes also modeled as an additional "E" axis,](#)  
345 [e.g., E1 for the first filament, E2 for the second filament, etc.](#)

### 346 **4.3 Cloud-Based Printing**

347 [Cloud-based printing can be supported by the existing IPP Shared Infrastructure](#)  
348 [Extensions \(INFRA\) \[PWG5100.18\]. Infrastructure Printers might require additional](#)  
349 [configuration or selection of drivers for the printer being configured, however that is outside](#)  
350 [the scope of this white paper and can be considered a part of provisioning the Cloud](#)  
351 [Service.](#)

352 [Snapshots of camera video can be uploaded as JPEG image resources using HTTP PUT](#)  
353 [requests from the Proxy to the Infrastructure Printer. Such resources need to be updated](#)  
354 [in an atomic fashion to allow Clients to safely poll for updates to the camera video.](#)

## 356 5. New Attributes

Deleted: [Editor's note: probably want a figure for this]

### 357 5.1 Job Template Attributes

#### 358 5.1.1 materials-col (1setOf collection)

359 This Job Template attribute defines the materials to be used for the Job. When specified,  
360 the Printer validates the requested materials both when the Job is created and when it  
361 enters the 'processing' state. If the requested materials are not loaded, the 'material-  
362 needed' keyword is added to the Printer's "printer-state-reasons" values and the Job is  
363 placed in the 'processing-stopped' state.

364 The Client typically supplies "materials-col" values matching those returned in the  
365 "materials-col-database" (section 5.2.1) or "materials-col-ready" (section 5.2.3) Printer  
366 Description attributes.

Deleted: s

##### 367 5.1.1.1 material-color (type2 keyword)

368 This member attribute provides a PWG media color value representing the color of the  
369 material.

##### 370 5.1.1.2 material-key (keyword)

Deleted: <#>material-diameter (integer) ... [6]

371 This member attribute provides an unlocalized name of the material that can be localized  
372 using the strings file referenced by the "printer-strings-uri" Printer attribute.

##### 373 5.1.1.3 material-name (name(MAX))

374 This member attribute provides a localized name of the material.

##### 375 5.1.1.4 material-type (type2 keyword)

376 This member attribute specifies the type of material. The keyword consists of a material  
377 name ('abs', 'pla', etc.) and form ('filament', 'liquid', 'powder', etc.) separated by an  
378 underscore. Values include:

379     'abs\_filament': Acrylonitrile Butadiene Styrene (ABS) filament.

380     'chocolate\_powder': Chocolate powder.

381     'gold\_powder': Gold (metal) powder.

382     'photopolymer-resin\_liquid': Photopolymer (liquid) resin.

383     'pla\_filament': Polylactic Acid (PLA) filament.

384     'pla-conductive\_filament': Conductive PLA filament.

389       'pla-flexible\_filament': Flexible PLA filament.  
390       'silver\_powder': Silver (metal) powder.

391 [Editor's note: This list needs to be expanded significantly...]

#### 392 **5.1.1.5 material-use (type2 keyword)**

393 This member attribute specifies what the material will be used for. Values include:

394       'in-fill': The material will be used to fill the interior of the printed object.  
395       'raft': The material will be used to print a raft under the printed object.  
396       'shell': The material will be used for the surface of the printed object.  
397       'support': The material will be used to support the printed object.

#### 399 **5.1.2 print-fill-density (integer(0:100))**

Deleted: <#>filament-retraction-distance (integer(0:[...]) [7])

400 This Job Template attribute specifies the in-fill density of interior regions in percent.

#### 401 **5.1.3 print-fill-thickness (integer(0:MAX))**

402 This Job Template attribute specifies the thickness of any in-fill walls in nanometers, with 0  
403 representing the thinnest possible walls.

404 [Editor's note: One comment requested speed/layer thickness attributes for in-fill, shells,  
405 and supports.]

#### 406 **5.1.4 print-layer-thickness (integer(0:MAX))**

407 This Job Template attribute specifies the thickness of each layer in nanometers, with 0  
408 representing the thinnest possible layers.

#### 409 **5.1.5 print-rafts (type2 keyword)**

410 This Job Template attribute specifies whether to print brims, rafts, or skirts under the  
411 object. Values include:

412       'none': Do not print brims, rafts, or skirts.  
413       'brim': Print brims using the 'raft' material specified for the Job.  
414       'raft': Print rafts using the 'raft' material specified for the Job.  
415       'skirt': Print skirts using the 'raft' material specified for the Job.

Deleted: -N

Deleted: Nth

Deleted: , where N is an integer from 1 to the number of materials

Deleted: -N

Deleted: Nth

Deleted: , where N is an integer from 1 to the number of materials

Deleted: -N

Deleted: Nth

Deleted: , where N is an integer from 1 to the number of materials

430        'standard': Print brims, rafts, and/or skirts using implementation-defined default  
431        parameters.

#### 432 **5.1.6 print-shell-thickness (integer(0:MAX))**

433 This Job Template attribute specifies the thickness of exterior walls in nanometers, with 0  
434 representing the thinnest possible wall.

**Deleted:** 'material-N': Print rafts using the Nth material,  
where N is an integer from 1 to the number of materials for  
the Job. \*

#### 435 **5.1.7 print-speed (integer(1:MAX))**

436 This Job Template attribute specifies the printing speed in nanometers per second.

#### 437 **5.1.8 print-supports (type2 keyword)**

438 This Job Template attribute specifies whether to print supports under the object. Values  
439 include:

440        'none': Do not print supports.

441        'standard': Print supports using implementation-defined default parameters.

442        'material': Print supports using the 'support' material specified for the Job.

**Deleted:** -N

**Deleted:** Nth

**Deleted:** , where N is an integer from 1 to the number of  
materials

#### 443 **5.1.9 printer-bed-temperature (integer | no-value)**

444 This Job Template attribute specifies the desired Build Platform temperature in degrees  
445 Celsius. The 'no-value' value is used to disable temperature control on the Build Platform.

#### 446 **5.1.10 printer-chamber-temperature (integer | no-value)**

447 This Job Template attribute specifies the desired print chamber temperature in degrees  
448 Celsius. The 'no-value' value is used to disable temperature control in the print chamber.

#### 449 **5.1.11 printer-fan-speed (integer(0:100))**

450 This Job Template attribute specifies the desired fan speed in percent of maximum. A  
451 value of 0 turns the fans off during printing.

### 452 **5.2 Printer Description Attributes**

#### 453 **5.2.1 materials-col-database (1setOf collection)**

454 This Printer Description attribute lists the pre-configured materials for the Printer. Each  
455 value contains the corresponding "materials-col" member attributes and will typically reflect  
456 vendor and site ("third party") materials that are supported by the Printer.

**464 5.2.2 materials-col-default (1setOf collection)**

465 This Printer Description attribute lists the default materials that will be used if the  
466 "materials-col" Job Template attribute is not specified.

**467 5.2.3 materials-col-ready (1setOf collection)**

468 This Printer Description attribute lists the materials that have been loaded into the Printer.  
469 Each value contains the corresponding "materials-col" member attributes.

**470 5.2.4 materials-col-supported (1setOf type2 keyword)**

471 This Printer Description attribute lists the "materials-col" member attributes that are  
472 supported by the Printer.

**473 5.2.5 material-type-supported (1setOf type2 keyword)**

474 This Printer Description attribute lists the supported "material-type" values for the Printer.

Deleted: <#>material-diameter-supported (1setOf (integer  
| rangeOfinteger)) ... [8]

Deleted:

**475 5.2.6 material-use-supported (1setOf type2 keyword)**

476 This Printer Description attribute lists the supported "material-use" values for the Printer.

**477 5.2.7 print-fill-density-default (integer(0:100))**

478 This Printer Description attribute specifies the default "print-fill-density" value in percent.

**479 5.2.8 print-fill-thickness-default (integer(0:MAX))**

480 This Printer Description attribute specifies the default "print-fill-thickness" value in  
481 nanometers.

**482 5.2.9 print-fill-thickness-supported (1setOf (integer(0:MAX) |  
483 rangeOfinteger(0:MAX)))**

484 This Printer Description attribute lists the supported "print-fill-thickness" values (or ranges  
485 of values) in nanometers.

**486 5.2.10 print-layer-order (type1 keyword)**

487 This Printer Description attribute specifies the order of layers when printing, either 'top-to-  
488 bottom' or 'bottom-to-top'.

**489 5.2.11 print-layer-thickness-default (integer(0:MAX))**

490 This Printer Description attribute specifies the default "print-layer-thickness" value in  
491 nanometers.

496 **5.2.12 print-layer-thickness-supported (1setOf (integer(0:MAX) |**  
497 **rangeOfInteger(0:MAX)))**

498 This Printer Description attribute lists the supported values (or ranges of values) for the  
499 "print-layer-thickness" Job Template attribute.

500 **5.2.13 print-rafts-default (type2 keyword)**

501 This Printer Description attribute specifies the default "print-rafts" value.

502 **5.2.14 print-rafts-supported (1setOf type2 keyword)**

503 This Printer Description attribute lists the supported "print-rafts" values.

504 **5.2.15 print-shell-thickness-default (integer(0:MAX))**

505 This Printer Description attribute specifies the default "print-shell-thickness" value in  
506 nanometers.

507 **5.2.16 print-shell-thickness-supported (1setOf (integer(0:MAX) |**  
508 **rangeOfInteger(0:MAX)))**

509 This Printer Description attribute lists the supported "print-shell-thickness" values (or  
510 ranges of values) in nanometers.

511 **5.2.17 print-speed-default (integer(1:MAX))**

512 This Printer Description attribute lists the default "print-speed" value in nanometers per  
513 second.

514 **5.2.18 print-speed-supported (1setOf (integer(1:MAX) | rangeOfInteger(1:MAX)))**

515 This Printer Description attribute lists the supported "print-speed" values (or ranges of  
516 values) in nanometers per second.

517 **5.2.19 print-supports-default (type2 keyword)**

518 This Printer Description attribute specifies the default "print-supports" value.

519 **5.2.20 print-supports-supported (1setOf type2 keyword)**

520 This Printer Description attribute lists the supported "print-supports" values.

521 **5.2.21 printer-accuracy-supported (collection)**

522 This Printer Description attribute specifies the absolute accuracy of the Printer. The "x-  
523 accuracy (integer(1:MAX))", "y-accuracy (integer(1:MAX))", and "z-accuracy  
524 (integer(1:MAX))" member attributes specify the accuracy in nanometers along each axis.

Moved (insertion) [1]

**525 5.2.22 printer-bed-temperature-default (integer | no-value)**

526 This Printer Description attribute specifies the default "printer-bed-temperature" value in  
527 degrees Celsius.

**528 5.2.23 printer-bed-temperature-supported (1setOf (integer | rangeOfInteger))**

529 This Printer Description attribute lists the supported "printer-bed-temperature" values (or  
530 ranges of values) in degrees Celsius.

**531 5.2.24 printer-camera-image-uri (1setOf uri)**

532 This Printer Description attribute lists the URIs for one or more resident camera snapshots.  
533 Each URI corresponds to a separate resident camera. The images referenced by each  
534 URI can change at any time so it is up to the Client to periodically poll for changes and for  
535 the Printer to atomically update the images so that Clients can safely do so.

**536 5.2.25 printer-chamber-temperature-default (integer | no-value)**

537 This Printer Description attribute specifies the default "printer-chamber-temperature" value  
538 in degrees Celsius.

**539 5.2.26 printer-chamber-temperature-supported (1setOf (integer | rangeOfInteger))**

540 This Printer Description attribute lists the supported "printer-chamber-temperature" values  
541 (or ranges of values) in degrees Celsius.

**542 5.2.27 printer-fan-speed-default (integer(0:MAX))**

543 This Printer Description attribute specifies the default "printer-fan-speed" value in percent.

**544 5.2.28 printer-fan-speed-supported (boolean)**

545 This Printer Description attribute specifies whether the "printer-fan-speed" Job Template  
546 attribute is supported.

**547 5.2.29 printer-head-temperature-supported (1setOf integer | rangeOfInteger)**

548 This Printer Description attribute specifies the supported "printer-head-temperature" values  
549 (or ranges of values) in degrees Celsius.

**550 5.2.30 printer-volume-supported (collection)**

551 This Printer Description attribute specifies the maximum build volume supported by the  
552 Printer. The "x-dimension (integer(1:MAX))", "y-dimension (integer(1:MAX))", and "z-  
553 dimension (integer(1:MAX))" member attributes specify the size in millimeters along each  
554 axis.

Deleted: <#>filament-retraction-distance-supported  
(1setOf (integer(0:MAX) | rangeOfInteger(0:MAX))) - ... [9]  
Moved up [1]: <#>printer-accuracy-supported  
(collection) ... [10]

## 561 **5.3 Printer Status Attributes**

### 562 **5.3.1 printer-bed-temperature-current (integer | no-value)**

563 This Printer Status attribute provides the current Build Platform temperature in degrees  
564 Celsius. If the Build Platform is not temperature controlled, the 'no-value' value is returned.

### 565 **5.3.2 printer-chamber-temperature-current (integer | no-value)**

566 This Printer Status attribute provides the current print chamber temperature in degrees  
567 Celsius. If the print chamber is not temperature controlled, the 'no-value' value is returned.

### 568 **5.3.3 printer-fan-speed-current (integer(0:100))**

569 This Printer Status attribute provides the current fan speed in percent.

### 570 **5.3.4 printer-head-temperature-current (1setOf (integer | no-value))**

571 This Printer Status attribute provides the current extruder head temperatures in degrees  
572 Celsius. The 'no-value' value is returned when the extruder head is not temperature  
573 controlled. [\[Editor's note: Do we need this if we are not specifying material temperature?\]](#)

## 574 **5.4 Other Potential Attributes**

575 Based on existing 3D printer software, the following parameters could also be candidates  
576 for standardization:

- 577 1. Initial layer thickness in nanometers
- 578 2. Initial layer line width in percent
- 579 3. Dual extrusion overlap in nanometers
- 580 4. Travel speed in nanometers per second
- 581 5. Bottom layer speed in nanometers per second
- 582 6. Infill speed in nanometers per second
- 583 7. Outer shell speed in nanometers per second
- 584 8. Inner shell speed in nanometers per second
- 585 9. Minimum layer time in seconds or milliseconds

## 586 **6. New Values for Existing Attributes**

### 587 **6.1 ipp-features-supported (1setOf type2 keyword)**

588 This document [suggests \(but does not register\)](#) the new value 'ipp-3d'. Deleted: defines

## 590 6.2 printer-state-reasons (1setOf type2 keyword)

591 This document [suggests \(but does not register\)](#) the following new values:

**Deleted:** defines

592 'camera-failure': A camera is no longer working.  
593 'cutter-at-eol': A cutter has reached its end-of-life and will need to be replaced soon.  
594 'cutter-failure': A cutter has failed.  
595 'cutter-near-eol': A cutter is near its end-of-life and may need to be replaced soon.  
596 'extruder-failure': An extruder has failed and requires maintenance or replacement.  
597 'extruder-jam': An extruder is jammed or clogged.  
598 'fan-failure': A fan has failed.  
599 'lamp-at-eol': A lamp has reached its end-of-life and will need to be replaced soon.  
600 'lamp-failure': A lamp has failed.  
601 'lamp-near-eol': A lamp is near its end-of-life and may need to be replaced soon.  
602 'laser-at-eol': A laser has reached its end-of-life and will need to be replaced soon.  
603 'laser-failure': A laser has failed.  
604 'laser-near-eol': A laser is near its end-of-life and may need to be replaced soon.  
605 'material-empty': One or more build materials have been exhausted.  
606 'material-low': One or more build materials may need replenishment soon.  
607 'material-needed': One or more build materials need to be loaded for a processing  
608 Job.  
609 'motor-failure': A motor has failed.  
610 'reservoir-empty': One or more reservoirs are empty.  
611 'reservoir-low': One or more reservoirs are almost empty.  
612 'reservoir-needed': One or more reservoirs are empty but need to be filled for a  
613 processing Job.

## 615 **7. Object Definition Languages (ODLs)**

616 This section provides information on several commonly used ODLs with either existing  
617 (registered) or suggested MIME media types.

### 618 **7.1 Additive Manufacturing Format (AMF)**

619 AMF [ISO52915] is a relatively new format that was designed as a replacement for the  
620 Standard Tessellation Language (STL). Its use has been hampered by the lack of a freely-  
621 available specification, but has several advantages over STL including:

- 622     1. Shared vertices which eliminates holes and other breaks in the surface  
623       geometry of objects,  
624     2. Specification of multiple materials in a single file,  
625     3. Curved surfaces can be specified, and  
626     4. Coordinates use explicit units for proper output dimensions.

627 The suggested (but not registered) MIME media type is model/amf.

**Deleted:** 'application

### 628 **7.2 Standard Tessellation Language (STL)**

629 STL [STLFORMAT] is widely supported by existing client software. The registered MIME  
630 media type is 'application/sla'.

**Deleted:** <#>G-Code

## 634 8. Internationalization Considerations

635 For interoperability and basic support for multiple languages, conforming implementations  
636 MUST support:

- 637     5. The Universal Character Set (UCS) Transformation Format -- 8 bit (UTF-8)  
638         [STD63] encoding of Unicode [UNICODE] [ISO10646]; and  
639     6. The Unicode Format for Network Interchange [RFC5198] which requires  
640         transmission of well-formed UTF-8 strings and recommends transmission of  
641         normalized UTF-8 strings in Normalization Form C (NFC) [UAX15].

642 Unicode NFC is defined as the result of performing Canonical Decomposition (into base  
643 characters and combining marks) followed by Canonical Composition (into canonical  
644 composed characters wherever Unicode has assigned them).

645 WARNING – Performing normalization on UTF-8 strings received from IPP Clients and  
646 subsequently storing the results (e.g., in IPP Job objects) could cause false negatives in  
647 IPP Client searches and failed access (e.g., to IPP Printers with percent-encoded UTF-8  
648 URIs now 'hidden').

649 [Implementations of this document SHOULD conform to the following standards on](#)  
650 [processing of human-readable Unicode text strings, see:](#)

652     [Unicode Line Breaking Algorithm \[UAX14\] – character classes and wrapping](#)  
653     [Unicode Normalization Forms \[UAX15\] – especially NFC for \[RFC5198\]](#)  
654     [Unicode Text Segmentation \[UAX29\] – grapheme clusters, words, sentences](#)  
655     [Unicode Identifier and Pattern Syntax \[UAX31\] – identifier use and normalization](#)  
656     [Unicode Character Encoding Model \[UTR17\] – multi-layer character model](#)  
657     [Unicode in XML and other Markup Languages \[UTR20\] – XML usage](#)  
658     [Unicode Character Property Model \[UTR23\] – character properties](#)  
659     [Unicode Conformance Model \[UTR33\] – Unicode conformance basis+](#)  
660     [Unicode Collation Algorithm \[UTS10\] – sorting](#)  
661     [Unicode Locale Data Markup Language \[UTS35\] – locale databases](#)

## 662 9. Security Considerations

663 In addition to the security considerations described in the IPP/1.1: Model and Semantics  
664 [RFC2911], the following sub-sections describe issues that are unique to 3D printing.

665 [Implementations of this specification SHOULD conform to the following standards on](#)  
666 [processing of human-readable Unicode text strings, see:](#)

667 [Unicode Security Mechanisms \[UTS39\] – detecting and avoiding security attacks](#)

668 [Unicode Security FAQ \[UNISECFAQ\] – common Unicode security issues](#)

669 [Editor's note: the rest is TBD but will include explosions, fires, and other physical risks that  
670 have been documented in the news and various documents and studies]

## 758 12. Change History

### 759 12.1 July 29, 2015

Deleted: 8

- 760 1. Dropped all references to X3G and G-code.
- 761 2. Reworked materials-col to specify materials but not temperatures and other
- 762 physical properties
- 763 3. Added "material-use" member attribute to assign materials to specific uses.
- 764 4. Supports and rafts pick materials based on "material-use" values and not
- 765 indices.
- 766 5. Added reference to IPP INFRA
- 767 6. Added printer-camera-image-uri Printer Description attribute.

### 768 12.2 April 13, 2015

- 769 1. Updated front matter to incorporate new IEEE-ISTO boilerplate for a contributed
- 770 white paper.

### 771 12.3 April 5, 2015

- 772 1. Updated front matter to remove IEEE-ISTO boilerplate.
- 773 2. Fixed various typos
- 774 3. Clarified that SLC files are commonly known as STL files.
- 775 4. Clarified that S3G is a binary version of G-code with a standard packet format.
- 776 5. Added use case for printing with loaded materials
- 777 6. Added use case for multi-material printing on a single material printer.
- 778 7. Added use case for monitoring print progress visually with a web cam.
- 779 8. Added exception for "skipping" (insufficient material flow/feed)
- 780 9. Added exception for adhesion issues
- 781 10. Added exception for build plate being full.
- 782 11. Added exception for head movement issues.
- 783 12. Added figure showing the typical coordinate system.
- 784 13. Expanded Job Template and Printer Description details, added comments for
- 785 discussion.
- 786 14. Added new Unicode considerations and references.

### 787 12.4 January 23, 2015

788 Initial revision.

Copyright © 2015 Apple Inc. All rights reserved.

This document may be copied and furnished to others, and derivative works that comment on, or otherwise explain it or assist in its implementation may be prepared, copied, published and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice, this paragraph and the title of the Document as referenced below are included on all such copies and derivative works. However, this document itself may not be modified in any way, such as by removing the copyright notice or references to the IEEE-ISTO and the Printer Working Group, a program of the IEEE-ISTO.

Title: *IPP 3D Printing Extensions (3D)*

The IEEE-ISTO and the Printer Working Group DISCLAIM ANY AND ALL WARRANTIES, WHETHER EXPRESS OR IMPLIED INCLUDING (WITHOUT LIMITATION) ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

The Printer Working Group, a program of the IEEE-ISTO, reserves the right to make changes to the document without further notice. The document may be updated, replaced or made obsolete by other documents at any time.

The IEEE-ISTO takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights.

The IEEE-ISTO invites any interested party to bring to its attention any copyrights, patents, or patent applications, or other proprietary rights which may cover technology that may be required to implement the contents of this document. The IEEE-ISTO and its programs shall not be responsible for identifying patents for which a license may be required by a document and/or IEEE-ISTO Industry Group Standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention. Inquiries may be submitted to the IEEE-ISTO by e-mail at: [ieee-isto@ieee.org](mailto:ieee-isto@ieee.org).

The Printer Working Group acknowledges that the IEEE-ISTO (acting itself or through its designees) is, and shall at all times, be the sole entity that may authorize the use of certification marks, trademarks, or other special designations to indicate compliance with these materials.

Use of this document is wholly voluntary. The existence of this document does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to its scope.

## **About the IEEE-ISTO**

The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and flexible operational forum and support services. The IEEE-ISTO provides a forum not only to develop standards, but also to facilitate activities that support the implementation and acceptance of standards in the marketplace. The organization is affiliated with the IEEE (<http://www.ieee.org/>) and the IEEE Standards Association (<http://standards.ieee.org/>).

For additional information regarding the IEEE-ISTO and its industry programs visit:

<http://www.ieee-isto.org>

## **About the IEEE-ISTO PWG**

The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and Technology Organization (ISTO) with member organizations including printer manufacturers, print server developers, operating system providers, network operating systems providers, network connectivity vendors, and print management application developers. The group is chartered to make printers and the applications and operating systems supporting them work together better. All references to the PWG in this document implicitly mean "The Printer Working Group, a Program of the IEEE ISTO." In order to meet this objective, the PWG will document the results of their work as open standards that define print related protocols, interfaces, procedures and conventions. Printer manufacturers and vendors of printer related software will benefit from the interoperability provided by voluntary conformance to these standards.

In general, a PWG standard is a specification that is stable, well understood, and is technically competent, has multiple, independent and interoperable implementations with substantial operational experience, and enjoys significant public support.

For additional information regarding the Printer Working Group visit:

<http://www.pwg.org>

## **About the Internet Printing Protocol Workgroup**

The Internet Printing Protocol (IPP) working group has developed a modern, full-featured network printing protocol, which is now the industry standard. IPP allows a print client to query a printer for its supported capabilities, features, and parameters to allow the selection of an appropriate printer for each print job. IPP also provides job information prior to, during, and at the end of job processing.

For additional information regarding IPP visit:

<http://www.pwg.org/ipp/>

Implementers of this specification are encouraged to join the IPP mailing list in order to participate in any discussions of the specification. Suggested additions, changes, or clarification to this specification, should be sent to the IPP mailing list for consideration.

**No table of figures entries found.**

In your document, select the words to include in the table of contents, and then on the Home tab, under Styles, click a heading style. Repeat for each heading that you want to include, and then insert the table of contents in your document. To manually create a table of contents, on the Document Elements tab, under Table of Contents, point to a style and then click the down arrow button. Click one of the styles under Manual Table of Contents, and then type the entries manually. Figure 1 - An Example Figure .....

----------------------------	----------------------	---------------------------

The Interchangeable Variable Block Data Format for Positioning, Contouring, and Contouring/Positioning Numerically Controlled Machines [RS274D] defines the "G-code" format that is commonly used by 3D printers; and The S3G protocol [S3G] defines a simple network protocol and file format for controlling 3D printers.

### **material-diameter (integer)**

This member attribute provides the diameter of the printed material in nanometers. This attribute is only applicable for Printers that extrude their material.

### **material-feed-rate (integer)**

This member attribute provides the material feed rate in nanometers per second. This attribute is only applicable for Printers that extrude their material.

[Editor's note: Some feedback indicates that we might want to specify feed rate using volume...]

Page 15: [7] Deleted

Michael Sweet

2015-07-28 5:28 PM

### **filament-retraction-distance (integer(0:MAX))**

This member attribute specifies the filament retraction distance in nanometers. This attribute is only applicable to FDM Printers.

### **filament-retraction-speed (integer(0:MAX))**

This member attribute specifies the filament retraction speed in nanometers per second. This attribute is only applicable to FDM Printers.

### **extruder-temperature (integer | rangeOfInteger)**

This member attribute specifies the desired extruder temperature (or range of temperatures) in degrees Celsius. This attribute is only applicable to Printers that extrude their material.

### **print-speed (integer(1:MAX))**

This member attribute specifies the print speed in nanometers per second.

Michael Sweet

2015-07-28 10:46 PM

### **material-diameter-supported (1setOf (integer | rangeOfInteger))**

This Printer Description attribute lists the supported diameters (or ranges of diameters) of extruded material in nanometers.

### **material-feed-rate-supported (1setOf (integer | rangeOfInteger))**

This Printer Description attribute lists the supported feed rates (or ranges of feed rates) in nanometers per second.

[Editor's note: Some feedback indicates that we might want to specify feed rate using volume...]

Page 19: [9] Deleted

Michael Sweet

2015-07-28 10:58 PM

**filament-retraction-distance-supported (1setOf (integer(0:MAX) | rangeOfInteger(0:MAX)))**

This Printer Description attribute specifies the supported "filament-retraction-distance" values (or ranges of values) in nanometers.

**filament-speed-supported (1setof (integer(0:MAX) | rangeOfInteger(0:MAX)))**

This Printer Description attribute specifies the supported "filament-speed" values (or ranges of values) in nanometers per second.

**print-speed-supported (1setOf integer(1:MAX) | rangeOfInteger(1:MAX))**

This Printer Description attribute lists the supported "print-speed" values (or ranges of values) in nanometers per second.

**Page 19: [10] Moved to page 18 (Move #1)** Michael R Sweet 2015-07-29 8:58 AM

**printer-accuracy-supported (collection)**

This Printer Description attribute specifies the absolute accuracy of the Printer. The "x-accuracy (integer(1:MAX))", "y-accuracy (integer(1:MAX))", and "z-accuracy (integer(1:MAX))" member attributes specify the accuracy in nanometers along each axis.
