101 About the IEEE-ISTO

102

103 The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and flexible 104 operational forum and support services. The IEEE-ISTO provides a forum not only to develop 105 standards, but also to facilitate activities that support the implementation and acceptance of 106 standards in the marketplace. The organization is affiliated with the IEEE (<u>http://www.ieee.org/</u>) 107 and the IEEE Standards Association (<u>http://standards.ieee.org/</u>).

109 For additional information regarding the IEEE-ISTO and its industry programs visit 110 <u>http://www.ieee-isto.org</u>.

111

108

112

113 About the IEEE-ISTO PWG

114 The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and Technology Organization (ISTO) with member organizations including printer manufacturers, print 115 116 server developers, operating system providers, network operating systems providers, network 117 connectivity vendors, and print management application developers. The group is chartered to 118 make printers and the applications and operating systems supporting them work together better. 119 All references to the PWG in this document implicitly mean "The Printer Working Group, a 120 Program of the IEEE ISTO." In order to meet this objective, the PWG will document the results of 121 their work as open standards that define print related protocols, interfaces, procedures and 122 conventions. Printer manufacturers and vendors of printer related software will benefit from the 123 interoperability provided by voluntary conformance to these standards.

In general, a PWG standard is a specification that is stable, well understood, and is technically
 competent, has multiple, independent and interoperable implementations with substantial
 operational experience, and enjoys significant public support.

- 127 For additional information regarding the Printer Working Group visit: http://www.pwg.org

214 **1** Introduction

215

216 This document specifies an application of PDF (Portable Document Format) that has two

217 important properties: First, it is an "image"-based format, and proper rendering of the document is
 218 represented by (binary or color) images. Second, the format is suitable for incremental generation
 219 and thus it is a "streaming" format. The subset is called "PDF/is", for "PDF Image-Streamable".

220 PDF/is is formally a subset of PDF 1.4, and is intended to be fully compatible with software that

reads PDF 1.4. There are "profiles" of PDF/is, which are distinguished primarily by the methods if image compression and/or techniques employed. The representations of image data employed

223 are specified in the PDF 1.4 language reference [pdf], which in turn describes the PDF

224 representation of image data specified by ITU-T recommendations for black-and-white facsimile

225 ([t.4], [t.6]), ISO/IEG specifications for digital compression and coding of continuous-tone still

images [jpeg], and lossy/lossless coding of bi-level images [jbig2].

227 PDF/is is intended to be useful within the IPPFAX protocol [reference], which is used to provide a

228 synchronous, reliable exchange of image documents between senders and receivers. For this 229 reason, PDF/is also includes optional security features for encryption and digital signatures.

230 **2 Terminology**

231 This section defines terminology used throughout this document.

232 2.1 Conformance Terminology

233 Capitalized terms, such as MUST, MUST NOT, REQUIRED, SHOULD, SHOULD NOT, MAY,

234 NEED NOT, OPTIONAL, and PROHIBITED, have special meaning relating to conformance as

defined in RFC 2119 [rfc2119] and [rfc2911] section 12.1. If an implementation supports the

extension defined in this document, then these terms apply; otherwise, they do not. These terms

237 define conformance to *this document (and [rfc2911]) only*; they do not affect conformance to

238 other documents, unless explicitly stated otherwise. To be more specific:

239 REQUIRED (REQ) - an adjective used to indicate that a conforming PDF/is Producer or

240 Consumer's implementation MUST support the indicated operation, object, attribute, or attribute 241 value. See [rfc2911] "Appendix A - Terminology for a definition of "support".

242 RECOMMENDED (REC) - an adjective used to indicate that a conforming PDF/is Producer or

243 Consumer's implementation SHOULD support the indicated operation, object, attribute, or 244 attribute value.

245 OPTIONAL (OPT) - an adjective used to indicate that a conforming PDF/is Producer or

246 Consumer's implementation MAY support the indicated operation, object, attribute, or attribute 247 value.

248 **PROHIBITED (PROH)** - an adjective used to indicate that a conforming PDF/is Producer or

249 Consumer's implementation MUST NOT support the indicated operation, object, attribute, or 250 attribute value.

Page 7 of 33 Copyright © 2002-2003 IEEE-ISTO. All rights reserved. This is an unapproved IEEE-ISTO PWG Working Draft, subject to change. 251 AS SPECIFIED - is used to indicate that a conforming PDF/is Producer or Render implementation MUST, MAY, or MUST NOT support the indicated operation, object, attribute, or 252 253 attribute value as is defined in the indicated specification. 254 OR - a conjunction that specifies a logical 'or', implying that a choice of one or more of the 255 choices specified. Deleted: XOR - a conjunction that specifies a logical 'exclusive or' 256 2.2 Other Terminology implying that a choice of one and only one of the choices specified.¶ 257 The following terms are introduced and capitalized in order to indicate their specific meaning: Formatted: Bullets and Numbering 258 Implement - The specified feature is present in the Document. 259 260 Support - A Producer has the capability of Implementing the feature specified, or the Consumer 261 262 has the capability of understanding and acting on the Implementation. 263 264 Document - The PDF/is-formatted electronic representation of a set of one or more pages that 265 the Sender sends to the Receiver. 266 267 Consumer - This is the agent (software, hardware or some combination) that converts the 268 Document into a displayed or printed form. 269 Producer -- This is the agent (software, hardware or some combination) that creates the 270 Document. 271 Interpolation – See 'Interpolation' in [pdf] pg. 273. 272 Forward-Reference - In indirect object reference (See [pdf] Section 3.2.9) to an object that 273 appears later in the Document. 274 Cache - Consumer's storage, either memory, disk, or the like, to hold Document data as it's 275 received from the Producer. 276 Page-Relative Objects – Objects that are indirectly referenced (See [pdf] Section 3.2.9) by either a 'Page' Dictionary or through a chain of object references that start with a reference from a 277 Deleted: object 278 'Page' Dictionary, Deleted: object 279 Discarded - An adjective that describes a PDF object. An object is 'Discarded' when the 280 Consumer no longer has access to the data within the object in question. 281 Object Size - The number of bytes required to represent an object in the Document. The size is 282 calculated by subtracting the offset of the first byte of the line following the "endobi" of the object 283 in question, from the offset of the first byte of the object number (See [pdf] Section 3.2.9). 284 Imaging Area - For the Producer, the Imaging Area of a page is the area specified by the Page Formatted: Font: Bold 285 Dictionary's 'MediaBox'. The Producer should use the actual area images from the source media 286 for the 'MediaBox'. This would be the size of the input media for an edge-to-edge scan, for example. For the Consumer, the Imaging Area is an area on the output media that will contain all 287 288 of the page's image content (the "inking" area). The Consumer usually uses the output media's 289 printable area as the Imaging Area but may constrain it further to match the Producer's Imaging 290 Area. 291 Scaled Page – When the Consumer's Imaging Area does not match the Producer's Imaging Area Formatted: Font: Bold 292 within 1/72 of an inch in either height OR width, the page is considered to be a Scaled Page.

Deleted: 14 March 2003

IEEE-ISTO 510n.y-1.0 PWG Working Draft for Portable Document Format: Image-Streamable 24 March 2003,

Page 8 of 33 Copyright © 2002-2003 IEEE-ISTO. All rights reserved. This is an unapproved IEEE-ISTO PWG Working Draft, subject to change.

ļ	IEEE-ISTO 510n.y-1.0 PWG Working Draft for Portable Document Format: Image-Streamable 24 March 2003, Deleted: 14 March 2003
293 294 295	Horizontal Scaling Factor – The Horizontal Scaling Factor is equal to the Consumer's Imaging Formatted: Font: Bold Area width divided by the Producer's Imaging Area width, but MUST be 1.0 for a non-Scaled Page.
296 297	Vertical Scaling Factor – The Vertical Scaling Factor is equal to the Consumer's Imaging Area Formatted: Font: Bold height divided by the Producer's Imaging Area height, but MUST be 1.0 for a non-Scaled Page.
298 299 300	Originator Identifier – An Image XObject that indicates information about the originator of the Formatted: Font: Bold Document. See the protocol spec referencing this specification for details on what the 'Originator Identifier' MUST contain.

301 3 PDF Document Requirements

The following table specifies the required (REQ), prohibited (PROH), and optionally (OPT) Supported PDF objects/filters for a Producer and Consumer to be considered compliant with this specification. Requirements for a specific object/filter to be considered Supported can be found in the 'PDF Object Requirements' section of this specification.

317 4 PDF Object Requirements

The following sub-sections describe the object field values of the REQUIRED and OPTIONAL
 PDF objects in PDF/is. The numbers in '()'s refer to section numbers in the PDF Specifications
 [pdf], unless otherwise noted. 'AS SPECIFIED' refers to the PDF Specification [pdf] unless

321 otherwise noted.

All 'Required' and 'Optional' fields of a Document object (either specified here or referred to as
 'Required' or 'Optional' in [pdf] or [pdf-ppk]) MUST be Supported if the object in question is to be
 considered 'Supported by the Consumer'. This rule does not apply if the definition of an object
 specifically states the requirements for the Consumer.

Support for all 'Required' fields of a Document object (either specified here or referred to as
 'Required' in [pdf] or [pdf-ppk]) is REQUIRED if the object in question is to be considered
 'Supported by the Producer'. Support for all 'Optional' fields of a Document object is OPTIONAL

329 for the Producer. This rule does not apply if the definition of an object specifically states the

330 requirements for the Producer.

331	4.1 'PDF/is' <u>Dictionary</u>
332	The 'PDF/is' Dictionary is a new Dictionary object that is REQUIRED for a PDF/is document.

The existence of this dictionary object is the one and only way to determine if the PDF in question is a PDF/is Document. The references in this object to items referred to in the Document Trailer are necessary to satisfy 'Producer Requirement' #6, see Section 4.1.

336

Table 4-1: PDF/is Dictionary

Field	Туре	Specification
'Type'	Name	MUST have a value of '/Fis_PDFis'.
'Fis_Version'	Array of	REQUIRED: An array consisting of [MAJ_VER MIN_VER]
	Numeric	
	Objects	
'Encrypt'	Dictionary	MUST have same value as 'Encrypt' field in the 'Document
		Trailer'. See [pdf] table 3.12 for specification.
'Root'	Dictionary	MUST have same value as 'Root' field in the 'Document Trailer'.
		See [pdf] Table 3.12 for specification.
'Info'	Dictionary	MUST have same value as 'Info' field in the 'Document Trailer'.
		See [pdf] Table 3.12 for specification.
'ID'	Array	MUST have same value as 'ID' field in the 'Document Trailer'.
		See [pdf] Table 3.12 for specification.
'Fis_NextPage'	Dictionary	REQUIRED: MUST be an Indirect Object Reference to the first
		'Page, Dictionary'

Deleted: object	

IEEE-ISTO 510n.y-1.0 PWG Working Draft for Portable Document Format: Image-Streamable 24 March 2003

'Fis_DSig'	Dictionary	OPTIONAL: MUST be an Indirect Object Reference to the	
		'Signature Dictionary', if present.	
'Fis_OrigID'	Dictionary	REQUIRED: MUST be an Indirect Object Reference to the	
		<u>'Originator Identifier' Image XObject.</u>	
<u>'Fis_Duplex'</u>	Boolean	REQUIRED: MUST be 'false' unless the Document is known to	
		be duplex and all odd numbered pages precede all even	
		<u>numbered pages (1, 3, 5,, n*2 - 1, 2, 4, 6,, n*2) – note that</u>	
		the last page (n*2) is optional since the Document may have an	
		odd number of pages. See 'Page Ordering'.	

337

See [pdf] Section 3.2.5 for definition of an 'Array Object'. See [pdf] Section 3.2.2 for definition
 of a 'Numeric Object'.

340 4.1.1 'Fis_PDFis' Key

341 4.1.1.1 MAJ_VER:

The 'major' version number of this PDF/is specification to which the Producer conforms to
at the time the Document was created. The 'major' version of this specification is
currently '1'.

345 4.1.1.2 MIN_VER:

The 'minor' version number of this PDF/is specification to which the Producer conforms to
 at the time the Document was created. The 'minor' version of this specification is
 currently '0'.

349 4.1.1.3 Example

350 351	An example of the PDF/is <u>Dictionary</u> for an encrypted, digitally signed, Document that needs Deleted: object a 4 Megabyte cache might look like this:
352	1 0 obj
353	<<
354	/Type /Fis_PDFis
355	/Fis PDFis [1 0]
356	/Encrypt 2 0 R

393 4.5 File Trailer

394 See [pdf] Table 3.12.

395

Table 4-5: File Trailer

Field	Specification
'Size'	AS SPECIFIED
'Prev'	PROHIBITED
'Root'	AS SPECIFIED
'Encrypt'	AS SPECIFIED
'Info'	REQUIRED.
ʻID'	REQUIRED. MUST use a pseudo-random number in place of 'File Size' when generating this value. See [pdf] Section 9.3 for guidelines on how to generate this value. Rationale: Using a random number in place of file size is due to the requirements of using this field in generating the encryption key for the 'standard encryption' algorithm ([pdf] Step 5 of Algorithm 3.2, pg. 78): file size will not be known at the time this field is needed.

396

397 4.6 Encryption Dictionary

398 See [pdf] Table 3.13 and [pdf-ppk] Table 3.

399

- 400 The specification of the Encryption Dictionary depends on which type of encryption is
- 401 Implemented in the Document. See the appropriate table, below.

Deleted: object

402

Table 4-6: Standard Encryption Dictionary <STD-ENC>

Field	Specification
'Filter'	MUST have a value of 'Standard'
'V' MUST have a value of '2'.	
'Length'	REQUIRED
'R'	AS SPECIFIED
'O'	AS SPECIFIED
'U'	AS SPECIFIED
'P'	AS SPECIFIED
'SubFilter'	PROHIBITED
'Recipients'	PROHIBITED

403

404

405 **4.7 Document Catalog**

406 See [pdf] Table 3.16. 407

408 It should be noted that Page Attributes MUST NOT be Inherited (See [pdf] pg. 91) due to the

409 nature of the ordering of the objects in this format. Rationale: Since the parent object (a Page

410 Tree Node) of a Page Dictionary will not appear in the Document until after the page, streaming

- 411 of the data for a page that has an inherited attribute would not be possible.
- 412

'Annots' PROHIBITED. 'AA' PROHIBITED. 'Metadata' AS SPECIFIED 'PieceInfo' AS SPECIFIED 'StructParents' PROHIBITED. 'ID' PROHIBITED. 'PZ' OPTIONAL for both Producer and Consumer. 'SeparationInfo' PROHIBITED. REQUIRED: An Indirect Object Reference to either: the next 'Page, Dictionary'; 'Fis_NextPage' Deleted: or, if this is the last page in the Document, to an object that does not exist in Deleted: object the Document and is marked 'free' in the 'xref' table (See Page 65 of [pdf]). 'Fis Duplex' OPTIONAL: A 'boolean' object that defaults to 'false' and MUST be 'false' unless 'Fis Duplex' in the 'PDF/is Dictionary' is 'true' and this is the first even numbered page in the Document Formatted: Heading 3 Page Ordering The Producer SHOULD order the pages in the Document sequentially from 1 to 'n'. For example, if the original document is duplex, the Producer SHOULD attempt to place the content from the back of page 1 (page 2) immediately after the content from page 1. This is preferable to placing content from all page fronts (odd number pages) followed by the content from all page backs (even numbered pages). If the Producer chooses not to follow this page ordering guideline, the Producer MUST place all of the page fonts in the Document before all of the page backs – all odd numbered pages MUST precede all even numbered pages. In addition, the Producer MUST indicate this fact by specifying '/Fis_Duplex true' boolean object in the PDF/is Dictionary. The point at which the pages are flipped MUST be indicated by placing the '/Fis_Duplex true' boolean object in the Page

Dictionary of the first even numbered page. 444 4.10 Content Streams

445 All objects referenced from a Content Stream MUST appear in the Document in the same order 446 they appear in the Content Stream.

Page 16 of 33 Copyright © 2002-2003 IEEE-ISTO. All rights reserved. This is an unapproved IEEE-ISTO PWG Working Draft, subject to change.

Deleted: 14 March 2003

i	IEEE-ISTO 510n.y-1.0 PWG Working Draft for Portable Document Format: Image-Streamable	
Į	<u>24 March 2003</u>	Deleted: 14 March 2003
447	The 'Length' field of the stream (See [pdf] Table 3.4) MUST NOT be an indirect object reference.	
448 449	The dictionary mapping of Resource Names to indirect object numbers used in the Content Streams and Resource Dictionary MUST follow the following rule:	
450 451 452 453 454 455	All Resource Names (See [pdf] Section 3.7.2) MUST have their indirect object ID's as the trailing part of the Resource Name. Resource Names MUST NOT have any digits (0-9) anywhere else in their name. Names MUST start with a letter. Consumers SHOULD use this convention to avoid having to cache the entire page in order to gain access to the Resource Dictionary at the end of the page data. For example, a page with two images that are overlapping and masked, might look like this:	
456	3 0 obj %Page <u>dictionary</u> for page 1	Deleted: object
457 458 459 460 461 462 463	<pre>/Type /Page /Resources 4 0 R /Contents 5 0 R endobj</pre>	Deleted: object

517 Rational: Since Indirect Object References from within Resource Dictionaries are prohibited (See
518 [pdf] Section 3.7.2) we need a way to refer to these objects without requiring full buffering of a
519 page. By requiring the objects to be written this way, the Consumer can process the Content

- 520 Stream(s) and their associated Images and Color Spaces without requiring the Resource
- 521 Dictionary. The Resource Dictionary must be written at the end of the page since it must refer to
- 522 all objects that were used on the page.

523 See [pdf] Table 4.1:

	558 4.10.3
	559
560Only the 'Marked Content' flags 'Banding Operator' and the 'Cache operator' are561permitted in PDF/is, all other flags are PROHIBTED.	560 561
562 4.10.3.1 'Banding' Operator:	562 4.10.3 .
 Banding facilitates the creation of a complex series of images on a PDF/is page to a Consumer that may be memory constrained and unable to otherwise display the page. If the Producer of the Document is able to determine that the current page's image layering (or "masking") will violate the <u>cache memory</u> constraints of the Consumer; the Consumer MUST break up the current page into non-overlapping regions to be displayed ('Banding') or free up resources using the 'Cache Operator' (see below). Banding is specified in one of the <u>content streams</u> of the page. 	564 565 566 567 568 569 570 571

Page 19 of 33 Copyright © 2002-2003 IEEE-ISTO. All rights reserved. This is an unapproved IEEE-ISTO PWG Working Draft, subject to change.

	IEEE-ISTO 510n.y-1.0 PWG Working Draft for Portable Document Format: Image-Streamable	Deleted: 14 March 2003
573 574 575	To indicate that a new 'Band' is beginning, the content stream MUST contain the following operator syntax, exactly as shown:	
576 577	/Fis_band<> DP	
578	Where:	
579 580	Y: A 'Real Numeric Object' (See [pdf] Section 3.2.2) of the minimum Y-coordinate value that this band will contain.	
581 582	And: All accretingto values are in the 'default user appee' (See Indfling, 128) coordinate aveter	
583	All coordinate values are in the 'default user space' (See [pdf] pg. 138) coordinate system (0,0 is lower left), at 72 units per inch, relative to the Page Dictionary's 'MediaBox'.	- Deleted: Objects
584		Deleted: MediaBox
585 586	 Bands may only progress from top to bottom (highest to lowest Y coordinate). The lost Band on the page MUST not have a Danding energies the close of 	
580 587	 The last Band on the page MUST not have a Banding operator since the close of the Content Stream will indicate that the last band is to be rendered. 	
588	The extent of an image within a particular Band MUST meet the following	
589	requirements:	
590 591	 Its top edge MUST have a y-coordinate value less than the Y value of the previous Band. 	
592	 Its bottom edge MUST have a y-coordinate greater than, or equal to the 	
593	Y value of the current Band, or '0' if this is the last band.	
594 595	See the following examples to help illustrate this feature.	
596	See the following examples to help indistrate this readile.	
597	For the examples, below:	
598	N: [Y] Where 'N' is the order in which the hand annears in the Content Stream	
599 600	Where 'N' is the order in which the band appears in the Content Stream. 'Y' is the 'Y' value of the Band operator.	
601		
602 603	Example #1: an 8.5" X 11" page (612x792 units), divided into 3 equal sized Bands:	
	1: [528]	

1: [528]
2: [264]
3: (No
operator)

Example #2: and 11" X 17" page (792x1224 units), divided into 4 "bands":

1: [918]
2: [612]
3: [306]
4: (No operator)

A 'Band Operator' MAY occur in any Content Stream for that page. If the page has more than one Content Stream it MUST be considered as described in [pdf] page 89, under 'Contents'.

630 631 632 633 634 635 636	/Im3 Do % Display image in third band. /Fis_band <> DP Q 9 792 0 0 306 0 306 cm /Im4 Do % Display image in last band. endstream	
637	4.10.3.2 'Cache' Operator:	
638 639 640 641 642	The 'Cache Operator' allows the Producer of the Document to specify that certain 'cached' objects (See ' <u>Cached Objects</u> ' section in this specification) may be released from the cache at a certain point in the content stream. See 'Cache Release' section in this document for use of this operation. This operation would allow a Consumer to Discard specified objects to free resources for image operations. This operator has the following syntax:	
643	/Fis_cache <> DP	
644 645	Where 'OBJECTS' is an array of object ID references. For example:	
646	/Fis_cache <<.Fis_cache [23 0 R 34 0 R]>> DP	
647	will release objects 23 and 34 from the cache.	
648		
648 649	4.11 Resource Dictionaries	
049	4.11 Resource Dictionalies	
650 651	See [pdf] Table 3.21.	
652 653 654 655 656 657	The Resource Dictionary MUST reference all Image XObjects and ColorSpaces that are used on the current page. The position of the image objects, their masks, and color spaces with respect to each other is defined in the Image XObject section of this specification.	
	The 'Resource Dictionary' MUST be the last object for any given page. This is an indicator to the Consumer that the current page is complete.	Deleted: 12

663

664	The following rules MUST be adhered to:
665	 All color ('N' = 3) image data MUST be 'sRGB' color data (See [srgb]). Color images
666	MUST use the 'sRGB' standard ICC profile [srgb-icc].
667	 All gray scale ('N' = 1) image data MUST be 'Gray Gamma 2.2' color data. Gray scale
668	images MUST use the 'Gray Gamma 2.2' ICC profile [gray-icc].
669	The profiles indicated, above, MUST be Implemented in the Document, unmodified.
670	 The profile(s) <u>MUST be</u> Implemented <u>after their first reference (See Producer</u>
671	Conformance Requirement #6) and SHOULD be cached (See 'Cached Objects') for
672	further references,
673	•
674	Since the color image data meets the 'sRGB' specification, the Consumer has the following two
675	options:
676	1 Tune the output device to use 'sRGB' and 'Gray Gamma 2.2' image data. This
677	would allow the Consumer to avoid having to implement a full ICC profile engine. The
678	image data would be used directly which could greatly simplify the image data
679	processing.
680	2 Support ICC profiles. In this case, the Consumer does not need to know that the
681	image data conforms to 'sRGB' and 'Gray Gamma 2.2'; instead, the Consumer can
682	process the data using an entirely ICC based color management approach (See [icc]).
683	This method would be the choice for the Consumer that supports the full PDF
684	specification [pdf].
685	specification (pui).
686

Deleted: 13

Deleted: MUST be included in the Document before the first 'Page Object'.

Deleted: <#>ICCBased Color Space objects MUST NOT be considered to be 'Page Relative Objects' even though they are referenced from 'Page Objects'. Rationale: Since these objects may be used throughout the Document, they should not be discarded between pages.¶

687 4.13 Image XObjects

688

689 See [pdf] Table 4.35 & Table 3.4 for description of the following table.

690

Table 4-13: Image XObjects

Field	Specification
'Type'	MUST be 'XObject'
'Subtype'	MUST be 'Image'
'Width'	AS SPECIFIED
'Height'	AS SPECIFIED
'ColorSpace'	AS SPECIFIED, and see below. Only 'ICCBased' profiles are permitted.
'BitsPerComponent'	AS SPECIFIED
'Intent'	REQUIRED. 'Perceptual' is RECOMMENDED.
'ImageMask'	AS SPECIFIED
'Mask'	AS SPECIFIED, see below.
'SMask'	PROHIBITED.
'Decode'	AS SPECIFIED.
'Interpolate'	MUST be 'true'
'Alternates'	PROHIBITED.
'Name'	PROHIBITED.
'StructParent'	PROHIBITED.
'ID'	PROHIBITED.
'OPI'	PROHIBITED.
'Metadata'	AS SPECIFIED.
'Length'	MAY be an indirect object reference to a numeric object that MUST be the
	next object in the Document, See below,
'Filter'	REQUIRED: MUST be one of: 'DCTDecode', 'CCITTFaxDecode', or
	'JBIG2Decode'. No other filters are allowed.
'DecodeParms'	AS SPECIFIED.
'F'	PROHIBITED.
'FFilter'	PROHIBITED.
'FDecodeParms'	PROHIBITED.

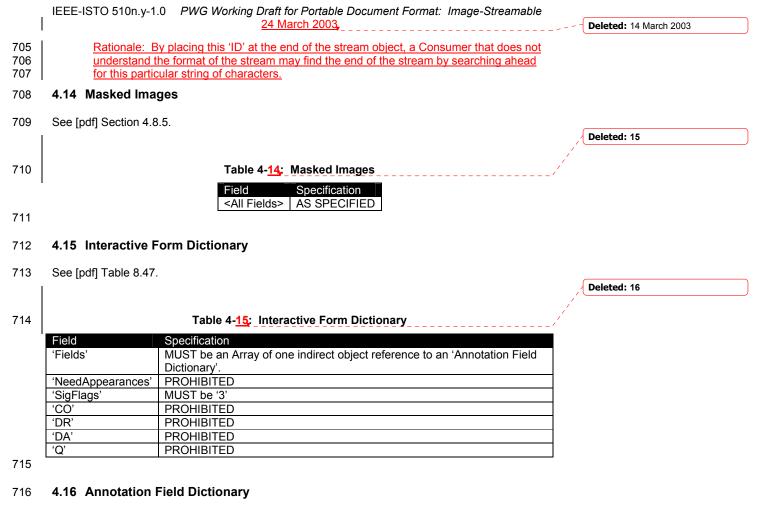

691

692 693	•	An 'ImageMask', if indicated in an Image XObject, MUST appear in the Document before the Image XObject that references it.	
694 695 696	•	All image data, regardless of compress method (Filter), MUST be ordered as specified in Section 4.8.3 and in Figure 4.26 of [pdf], contrary to the 'Note' at the bottom of page 265 of [pdf].	
697 698	<u>•</u>	If the 'Length' field is an indirect object reference to a numeric object, the 'endstream' flag for the stream data MUST have the following syntax:	Formatted: Bullets and Numbering
699		o endstream %ID['ID' field value from 'PDF/is Dictionary']	Formatted: Indent: Left: 36 pt
700		The 'endstream' marker MUST be written as shown without any additional spaces or line	Formatted: Indent: First line: 36 pt
701		breaks.	Formatted: Font: Times New
702		Using Section 4.1.1.3 as an example, we would have:	Roman, 9 pt
703		endstream %ID[<8c41995c6e014675e850d36e6c2f6114><8c41995c6e014675e850d36e6c2f6114>]	Formatted: Indent: First line: 36 pt, Space After: 0 pt
704			Formatted: Indent: Left: 36 pt, Space After: 0 pt

731 5 Object Lifetime

732 Some Consumer's may be limited in the amount of storage they may have to cache the 733 Document as it's received from the Producer. This storage limitation may prohibit the Consumer 734 from holding the entire Document before beginning to render the first page. To facilitate this 735 storage constraint, PDF/is has a mechanism of "object lifetime". This mechanism defines how long an object must be held in storage before it is no longer needed. 736 737 738 If a Document can be fully maintained in the Consumer's storage, i.e. the Consumer is a PC or 739 some other device with large guantities of storage; the Document's Cross-Reference table should be used to access objects as they are needed. In this case, the Consumer should follow the 740 741 parsing model as spelled out in the PDF Reference [pdf]. 742 If a Document cannot be fully maintained within the Consumers storage or if it is uncertain if it will 743 744 be able to do so, the Document MUST be linearly parsed and the following parsing rules MUST 745 be adhered to: 746 747 Documents MUST be parsed in order, from beginning to end. 748 All Consumer's MUST have the ability to cache at least 4 Megabytes (4,194,304 bytes) of PDF/is Document data. This memory is in addition to any memory required for JBIG2 749 750 image processing (2 Megabytes, See 'JBIG2Decode' Section) and for raster image 751 buffers on the Consuming device. 752 753 At the end of generation of each Dictionary Object (See [pdf] Section 3.2.6), the Producer MUST ensure that 4 Megabyte cache memory limit will not been exceeded when the Consumer reads 754 the Document. If the limit will be exceeded, the Producer MUST either reorganize the current 755 756 page by using either "Banding", freeing up some "cached" objects, reducing the use of masked images (or lowering their resolution), or by using some other process in order to avoid breaking 757 the cache buffer limit. 758 759 Calculation of the current cache buffer size MUST follow the following formula: 760 The current total Document size (in bytes) that has been created up to the point at which 1) 761 this calculation is being made. 762 2) Minus the 'Object Size' of all released 'Cached' objects (See "Cached Objects" Section of 763 this specification), up to that point. Minus the 'Object Size' of all non-cached 'Page-Relative Objects' for previous pages, not 764 3) 765 already accounted for by #2. 766 4) Minus the 'Object Size' of all non-cached 'Image XObjects' data for any previous 'Bands' 767 on the current page; if the page is "Banded". 768 Minus the 'Object Size' of the last 'Image XObject' in the current 'Band', if the page is 5) "Banded". 769 770 Minus the 'Object Size' of the 'Image XObject' for the current page, if the page is not 6) 771 "Banded". 772 Rationale: The last two items assume that the Consumer will process image data as it is

773 received and will not need to cache these objects before rendering.

Page 26 of 33 Copyright © 2002-2003 IEEE-ISTO. All rights reserved. This is an unapproved IEEE-ISTO PWG Working Draft, subject to change.

Deleted: 14 March 2003

774

775 6 Cached Objects

776 If a 'Page-Relative' object MAY be used on more than one page or in more than one 'Band', it will

be necessary to specify the object as 'Cached'. This will allow an object to be used throughout
 the Document that otherwise would be discarded. This caching mechanism only applies to

- ⁷⁷⁹ 'Page-Relative' 'Dictionary Objects'; see [pdf] Section 3.2.6.
- An object that is held in the Consumers cache by the 'Cache Hold' mechanism MUST be
 maintained in the cache until one of the following conditions is met:
- The '<u>Cache Operator</u>' is invoked on this object in a page's <u>Content Stream</u>.
- The '<u>Document Catalog</u>' is reached.
- To specify that a particular object should be 'cached', add the following Name Object (See [pdf]
 Section 3.2.4) to the Dictionary Object (See [pdf] Section 3.2.6) to be cached:
- 786 /Fis_Cache

787 7 Conformance Requirements

788 This section specifies the conformance requirements for Consumers and Producers.

789 7.1 Producer conformance requirements

790 In order to conform to this specification, a Document Producer:

791	1.	MUST specify the version of PDF (See [pdf] Section 3.4.1) as being 'PDF 1.4'.		
			1	Deleted: '
792	2.	MUST place the 'PDF/is, <u>Dictionary'</u> as the first object in the PDF.	<u> </u>	Deleted: object
793 794	3.	MUST place any 'Encryption Dictionary' object as the second object in the PDF/is Document, if the Document is encrypted.		
795 796	4.	MUST NOT include any private 'PDF Name Registry' values/objects (See [pdf] – Appendix E) that affect printed output.		
797 798 799 800 801	5.	MUST place the objects: 'Interactive Form Dictionary', 'Field Dictionary' and 'Digital Signature' object as the last three objects (in that order) in the Document, if the Document is Digitally Signed. Note that in a situation where the Consumer cannot cache the entire document before rendering, the detection of a valid or invalid Digital Signature will only occur after rendering of the entire Document.		
802 803 804	6.	MUST ensure that there is at least one Forward-Reference to each object. The only object that does not have to follow this rule is the <u>'PDF/is Dictionary'</u> . Rationale: This will aid the Consumer with identifying objects as they are encountered in the data stream.		Field Code Changed
805 806 807	7.	MUST ensure that all objects appear in the PDF AFTER the object in which they are first referenced (Satisfied by Requirement 6) and BEFORE the next 'Page <u>Dictionary'</u> unless the object is a Cached Object (See Section 3.4).		Deleted: Object
808	8.	MUST ensure that all object identifiers ([pdf] Section 3.2.9) start at the beginning of a line.		

Page 27 of 33 Copyright © 2002-2003 IEEE-ISTO. All rights reserved. This is an unapproved IEEE-ISTO PWG Working Draft, subject to change.

	IEEE-ISTO 510n.y-1.0 PWG Working Draft for Portable Document Format: Image-Streamable 24 March 2003,	Deleted: 14 March 2003
809 810	 MUST ensure that all 'endobj' keywords ([pdf] Section 3.2.9) start at the beginning of a line. 	
811	10. MUST NOT Linearize the Document. See [pdf] Appendix F.	
812	11. MUST NOT Incrementally Update the Document. See [pdf] Section 3.4.5.	
813 814 815	 MUST only encoded images with resolutions of at least 300 but not more than 1200 dots per inch (dpi). It is <u>strongly</u> RECOMMENDED that the Producer place <u>original</u> images in the Document without Interpolation. 	Deleted: of the image(s)
816 817 818	13. MUST include an Originator Identifier image that MUST be displayed on, at least, the first ← · page. The image MUST be referenced by the 'Fis_OriginatorID' field in the 'PDF/is Dictionary' and MUST be 'cached' if displayed on more than the first page.	Formatted: Bullets and Numbering
819	7.2 Consumer conformance requirements	
820	In order to conform to this specification, a Document Consumer:	Deleted: DDC/ie
821	1. MUST Support all of the REQUIRED objects.	Deleted: PDF/is
822 823	 MUST Interpolate images up or down in resolution, as required, to properly match the Document's image resolution(s) to the Consumer's device capabilities. 	
824 825	 MUST abide by the "Object Lifetime" rules in Section 3.4 if unable to Cache the entire Document. 	
826	4MUST terminate processing of the Document if it is detected that the Document has been	Deleted: ¶
827	incrementally updated (See [pdf] Section 3.4.5) as these Documents are PROHIBITED, $_{}$	Formatted: Bullets and Numbering
828 829	 MUST have a Horizontal Scaling Factor that is within 0.3% of the Vertical Scaling Factor for all pages. 	Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, + Start at: 1 + Alignment: Left + Aligned at:
830 831	 MUST have all Vertical and Horizontal Scaling Factors within the range of 0.9 and 1.1, inclusive for all pages. 	18 pt + Tab after: 36 pt + Indent at: 36 pt
832	7. MUST display the Originator Identifier where specified in a page's Content Stream.	
833 834	 8 Jssues None currently. 	Deleted: <#>MUST render all images to the scale specified (See 'cm' operator) in the Document to within 1 point (1/72 of an inch), if the output media printable area is greater than or equal to the Page Object's 'Media Box'. ¶ <#>MUST render all images isomorphically scaled to the output

media printable area, if the output

media printable area width is less than the Page Object's 'Media Box'

Formatted: Bullets and Numbering

width.¶

835 9 Sample PDF/is PDFs

The 'source' of the sample document in this section can be viewed with any text editor but should
only be modified with a binary editor, as the stream data contained therein is not compatible with
text editors. Comments on the format of the documents are contained within the documents
themselves.

937 16.1 Intellectual Property Statement – Adobe Systems Incorporated

938The following statement is in addition to the Intellectual Property Statement in the PDF Reference (See939[pdf] Section 1.4).

941 Patent Clarification Notice Specific to Use of PDF for IPP FAX Protocol

942
943 Adobe has a number of patents covering technology that is disclosed in the Portable Document Format
944 (PDF) Specification, version 1.4 and later, as documented in PDF Reference and associated Technical
945 Notes (the "PDF Specification"). Adobe desires to promote the use of PDF as the file format for a future,
946 IPP FAX Protocol to be proposed, recommended, finalized and published by the IEEE Printer Working
947 Group (the "IPP FAX Standard").

949 This Patent Clarification Notice is in addition to the permissions statement set forth in Section 1.4 of the
 950 PDF Reference which shall also apply to Adobe's contribution to the IPP FAX Standard.
 951

Accordingly, Adobe agrees to provide a Royalty Free License to all Essential Claims solely for the purpose
of implementing the IPP FAX Standard. Adobe and the IEEE Printer Working Group will identify and
establish, within the final, published release of the IPP FAX Standard, a process whereby implementers of
the IPP FAX Standard can request and obtain the above license.

957 No license shall be extended to those implementing only draft versions of the IPP FAX Standard.

958959 A "Royalty Free License" shall mean a license that:

- shall be available to all implementers of the IPP FAX Standard worldwide, whether or not members of the IEEE Printer Working Group;
- ii) shall extend to all Essential Claims owned or controlled by Adobe and its Affiliates;
- iii) shall not be conditioned on payment of royalties, fees or other consideration except as described in (iv) and (v) below;
- iv) may be conditioned on a grant of a reciprocal license on identical terms to all Essential Claims owned or controlled by the licensee and its Affiliates; and
 - v) may include reasonable, customary terms relating to operation or maintenance of the license relationship including but not limited to the following: choice of law, dispute resolution, and patent notices.

972 "Essential Claims" shall mean all claims in any patent or patent application, in any jurisdiction in the
973 world, that (A) Adobe and/or its Affiliates own and (B) that would be necessarily infringed by
974 implementation of the IPP FAX Standard. A claim is necessarily infringed hereunder only when a licensee
975 can prove that it is not possible to avoid infringing it because there is no non-infringing alternative for
976 implementing the required portions of the IPP FAX Standard. Existence of a non-infringing alternative
977 shall be judged based on the state of the art at the time a licensee implements the IPP FAX Standard.

979 The following are expressly excluded from and shall not be deemed to constitute Essential Claims: 980

- 1) any claims other than as set forth above even if contained in the same patent as Essential Claims; and
- 983 2) claims that would be infringed only by984 a) portions of an implementation that
 - a) portions of an implementation that are not required by the IPP FAX Standard

```
    enabling technologies that may be necessary to make or use any product or portion thereof
that complies with the IPP FAX Standard but are not themselves expressly set forth in the IPP
FAX Standard; or
```

988 989 990 c) the implementation of technology developed elsewhere and merely incorporated by reference into the IPP FAX Standard.

For purposes of the Essential Claims definition, the "IPP FAX Standard" shall be deemed to include only
 architectural and interoperability requirements and shall not include any implementation examples or any
 other material that merely illustrates the requirements of the IPP FAX Standard.

995 An "Affiliate" of a first entity is a second entity that is controlled (greater than 50%) by, in control of, or

under common control with the first entity.

997
