

## Justin's Comments

1. Section 1: I understand the motivation for specifying an interface from device -> service, but should it live this spec? Will that reduce clarity?
2. Section 2.2: The definitions below assume the reader knows what "cloud" means, but the term is never properly defined. Do you mean a server? Do you mean a server that is off premise? Do you mean a server that is off premise and available over the internet? We need to be clear about those assumptions, and I'd recommend establishing it early.
3. Section 3.2: Some of these sections aren't use cases at all. Are they supposed to be? Wikipedia: "a use case is a list of steps, typically defining interactions between a role... and a system, to achieve a goal".
4. Section 3.2.1.2: This is a new term in this doc. What is it? (Cloud Print Server)
5. Section 3.2.1.2: This would be much more clear if the steps used active voice. I'm having a difficult time following who's doing what. For example:
  - Prerequisites: The Imaging device owner has created a Cloud Imaging Device Manager.
  - 1. The Imaging Device Owner assigns a Cloud Imaging Device Manager to the Device.
  - 2. The Cloud Imaging Device Manager queries the Device to determine available services and persists those in a database.
  - 3. The Imaging Device Owner assigns the Device's Cloud Imaging Service a data retention policy.
  - Postconditions: Cloud Imaging Service is configured and ready to accept user operations.
6. Section 3.2.1.3, item 1: This part makes the explanation muddy. Isn't a Client already defined to be a device, operating system or application?
7. Section 3.2.1.3, item 2: How does the user know ahead of time that the credentials are acceptable? Seems they would need to have an authentication ceremony whereby the exchange credentials and authenticate.
8. Section 3.2.1.3, item 3: How does the user know where this Cloud Service is?
9. Section 3.2.6: Since each Service that works on this request creates a Job for it, there would be three Jobs requesting from this request. There are various ways that the rollout could consider contributing Job states.
10. Section 3.4.5: Are the job events and parameters in the Log Spec sufficient?
