PWG Patent Statement

- PWG standards may include the known use of essential patents and patent applications provided the PWG Chair receives assurance from the patent holder or applicant with respect to patents whose infringement is, or in the case of patent applications, potential future infringement the applicant asserts will be, unavoidable in a compliant implementation of either mandatory or optional portions of the standard. This assurance shall be provided without coercion. This assurance shall be either:
 - a) A general disclaimer to the effect that the patentee will not enforce any of its present or future patent(s) whose use would be required to implement either mandatory or optional portions of the proposed PWG standard against any person or entity complying with the standard; or
 - b) A statement that a license for such implementation will be made available without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination.
- The PWG is not in a position to give authoritative or comprehensive information about evidence, validity or scope of patents or similar rights, but it is desirable that any available information should be disclosed. Therefore, all PWG members shall, from the outset, draw PWG's attention to any relevant patents either their own or of other organizations including their Affiliates that are known to the PWG members or any of their Affiliates, although PWG is unable to verify the validity of any such information.

Inappropriate Topics for PWG WG Meetings

PWG Working Group Status

PWG Plenary Status Report WIMS/CIM Working Group

Purpose of the effort

The WIMS working group is concerned with the management of imaging services and devices via the Web. The Objectives are:

- Continuing support and update of the protocols and specifications produced by the working group.
- Definition of new and the recasting of previously defined imaging device and service management elements into a web management compatible context.
- Continuing update and upgrade of the DMTF/CIM printing classes in anticipation of this forming the basis for imaging service and device management over the Web.
- Monitoring other standards activities relating to Web-base management of Imaging Systems

Work Items for the WG

- **What We're Doing**

- Continuing Update of DMTF/CIM Printing MOFs, as part of the work register agreement between the PWG and the DMTF and with the objective of ensuring printing management via a Web Services approach using CIM
- Providing information to include a management perspective in the Semantic Model effort.

- **What We're NOT Doing**

- We are no longer defining a Imaging management service or protocol.
- We are not involved in the extension or updating of Imaging Management protocols or protocols used for management, such as the Printer MIB over SNMP or the management aspects of IPP.
- The CIM Update effort seeks to include already defined management elements for inclusion in CIM, not to define new management elements.

PWG Plenary Status Report PDM Working Group

Goes Here

PWG Plenary Status Imaging Device Security (IDS) Working Group

Longmont, CO - PWG F2F Meeting
June 25, 2008

Purpose of the effort

- The industry is moving beyond basic authentication for access to corporate networks to a fairly detailed assessment of the device that is connecting before being allowed to access the network.
 - Examples of what's being measured for PC Clients:
 - OS Type, Version, Patch Level
 - Anti-virus Type, Version, Definition Level, Is Active
- Hardcopy Devices attach to networks, but there's no standard set of metrics that is used to assess an HCD.
- Our Goal is to provide these metrics!!!

Work Items for the WG

- What We're Doing
 - Defining a standard set of metrics that might be measured or assessed in Hardcopy Devices to gauge if they should be given access to a network
 - Defining example "bindings" for how these metrics are used in the individual network assessment protocols.
- What We're NOT Doing
 - We are NOT defining any new assessment protocols or assessment extensions to existing authentication protocols.
 - We are NOT endorsing any of the competing network assessment protocols (NEA/TNC, NAC, NAP), but plan to enable Hardcopy Devices to participate in any/all of them.

Working Group Officers

IDS WG Chairs:

- Peter Cybuck (Sharp),
- Ron Bergman (Ricoh)

• IDS WG Secretary:

- Lee Farrell (Canon)

• IDS WG Document Editors:

- Jerry Thrasher (Lexmark),
- Ron Nevo (Sharp)
- Brian Smithson

Status

- Reviewed Network Assessment Protocols
 - Cisco NAC (Network Access Control)
 - TCG TNC (Trusted Network Connect)
 - Microsoft NAP (Network Access Protection)
 - IETF NEA (Network Endpoint Assessment)
- NAP appears to be the most mature
 - Well documented (public documents)
 - Supported in MS O/S versions
- Defined an initial set of assessment attributes
- Current effort is to
 - Develop Assessment Attribute Specification.
 - Map Assessment Attributes into NAP.
 - Determine the required NAP protocol stacks.

Schedule

- Q1 2008: Initial education and Study
 - Specify Network Assessment Protocols
 - Develop (Use Cases) and Requirements
- Q2 2008: Draft Proposals
 - Required Minimal Attribute Set
 - Extended Attribute Set
- Q3 2008: Standard Finalization
- Q3 2008: Draft Bindings
- Q4 2008: Finalization of Bindings

 - July 10
 - July 24
 - August 7

PWG IP Policy Update Status

- Current Plan is to have the update of the IP Policy to reflect the current IEEE policy and other operating documents complete for first review after the August F2F meeting.
- New PDF Form of current membership and LOA forms.
- Preview of new LOA form.
- Other new operating documents and forms.

SNMP to CIM Proxy BoF overview

- SNMP management is widely implemented in imaging devices, however this management mechanism is increasingly considered inappropriate for some networks and is not seen as a desirable future management scheme.
- WS-Man is the leading Web Services-based management protocol for the management of devices in the server and PC space.
- Is there an interim mechanism that would allow imaging devices supporting SNMP to be managed by a Web Services-based management application?
- Would such a mechanism encourage migration to Web Services-based management by allowing the migration without requiring that the existing base of imaging devices be immediately replaced?
- To what extent should the PWG encourage or participate in the development of such a mechanism?
- This will be discussed during the WIMS/CIM F2F session on Wed. (06/25) from 2:00 to 4:00 PM MDT.

PWG BoFs and Potential Future Items

- Potential projects being discussed
 1. Vendor Private/Enterprise MIB repository
 - Provide a managed directory (or web site) for vendors to include information about their private MIB(s).
 2. Best Practices for implementing the IEEE 1284 Device ID String
 - Standardization of the keywords that are used in the 1284 string such that they can be programmatically parsed more effectively.
- Other Items
 1. Web 2.0 Widgets and how they might apply to Hardcopy Devices (Randy Turner)
