

# BMLinkS Overview for PWG Members

- 1. BMLinkS Goals
- 2. Specifications
  - 1. Discovery
  - 2. Job/Device Control
  - 3. Data Format
  - 4. UI Guideline
- 3. Applications
- 4. Future

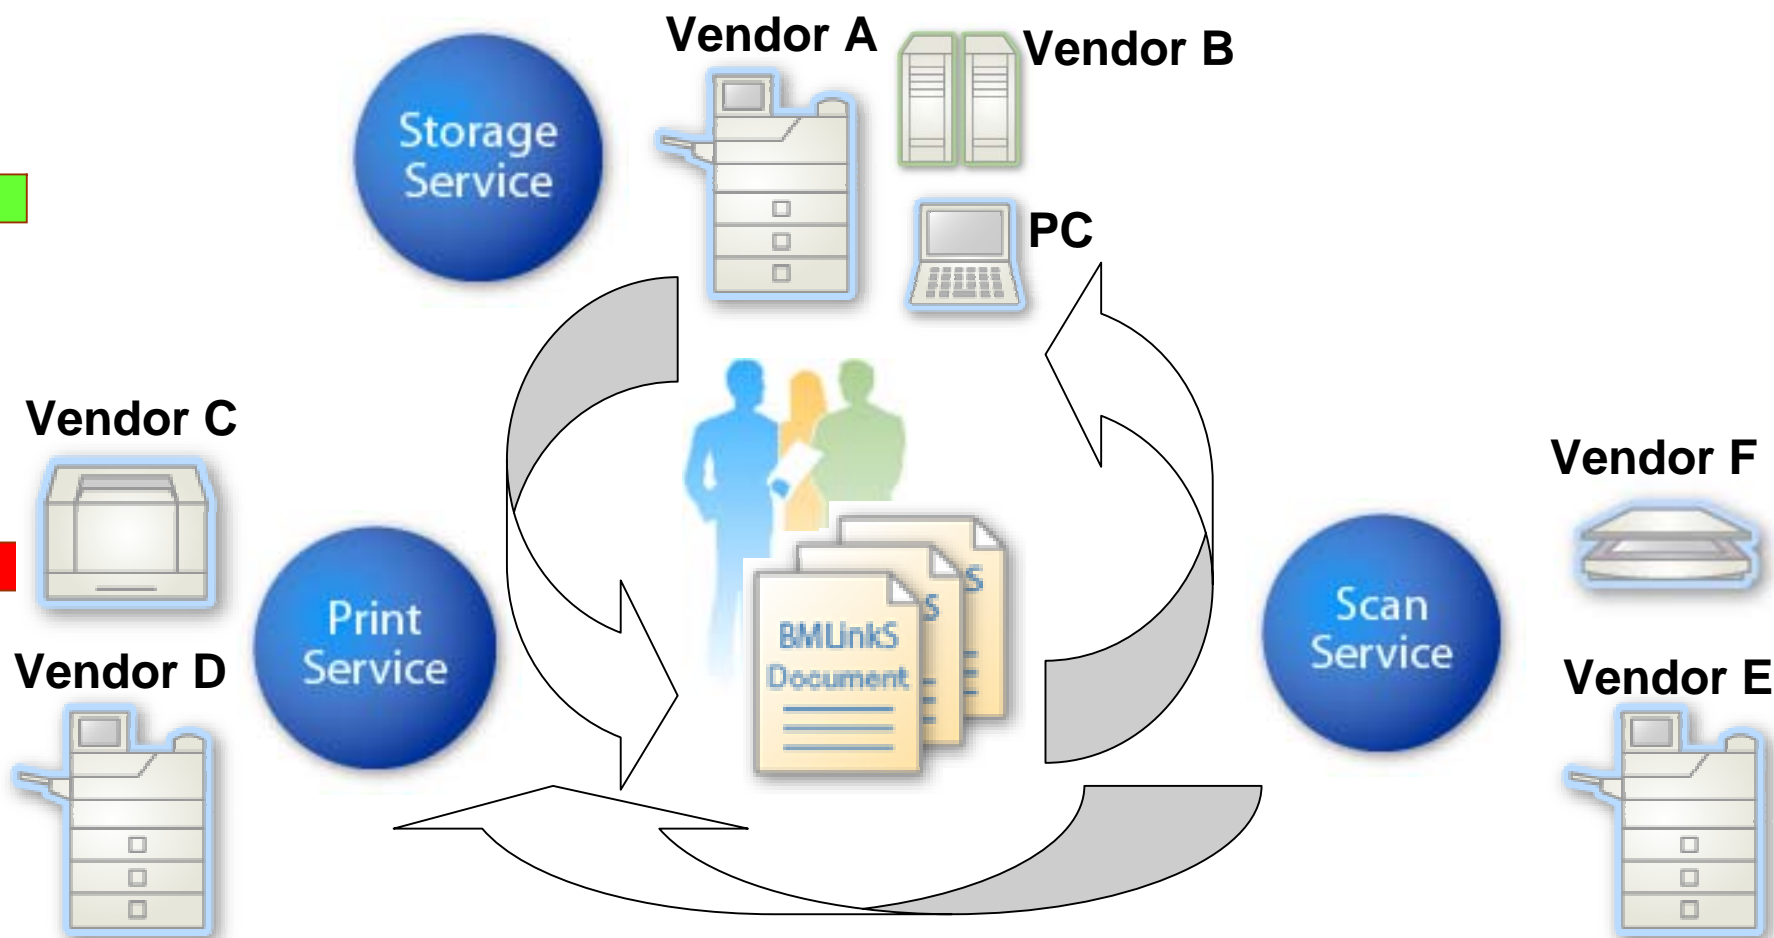

# Printer State Extension

Thank you for considering our request

## Goals

- ◆ **BMLinkS is the interface for Office Devices**
  - ◆ **MFP, LP, and Scanner**
- ◆ **Office Devices are network nodes providing services**
  - ◆ **More than simple I/O Devices**
  - ◆ **Interact with each other: Push Print, Print-from-Storage, Scan-to-Print, Scan-to-Storage**  
=> **Provides Services**
- ◆ **Catch Phrase: Find, Connect, and Use**

# BMLinkS Services

# Specifications

## ◆ Discovery

Intranet and Internet

## ◆ Job/Device Control

Operation Models for Print, Scan, Storage, Fax-In, Fax-Out, Notification

## ◆ Data Format

Common data format for all office services

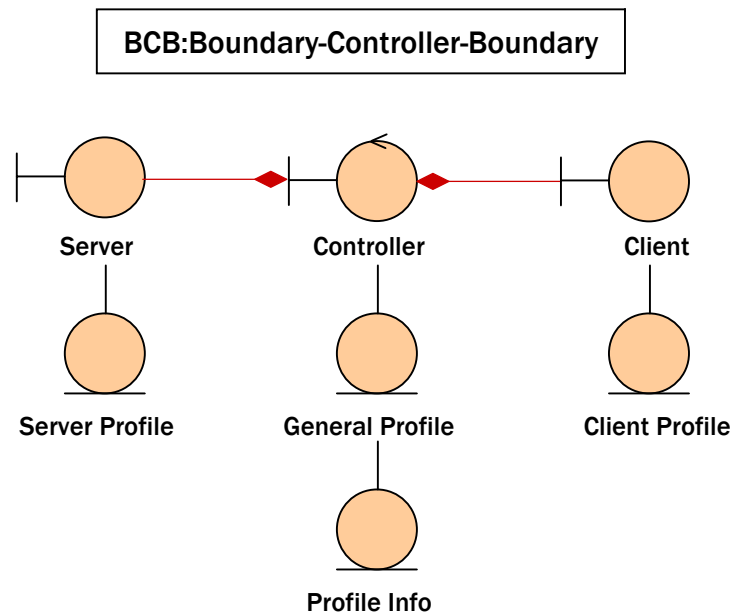

## ◆ UI Guideline

MFP/LP/Scanner Panel Operation flow for BMLinkS operations

# Discovery

- ◆ Available Technology
  - ◆ UPnP was for Home, not for office
  - ◆ SNMP broadcast available
  - ◆ No WS-Discovery yet
- ◆ Need something for Office (LAN & WAN)
- ◆ Solution:
  - ◆ Multicast & Discovery Server with SOAP support
  - ◆ Multicast Limited to within one network segment
  - ◆ Client discovery

# Discovery: BCB Model

## Office Service Variations

**Type 1: Print by remote instruction to the Server – Normal Printers**

**Type 2: Print-from-Storage by remote instruction to the Server**

**Type 3: Print-from-Storage by local panel operation**

**Type 4: Scan-to-storage by remote instruction to the Server – Remote Scanner**

**Type 5: Scan-to-Print by local operation – Normal Printers**

**Type 6: Storage Service**

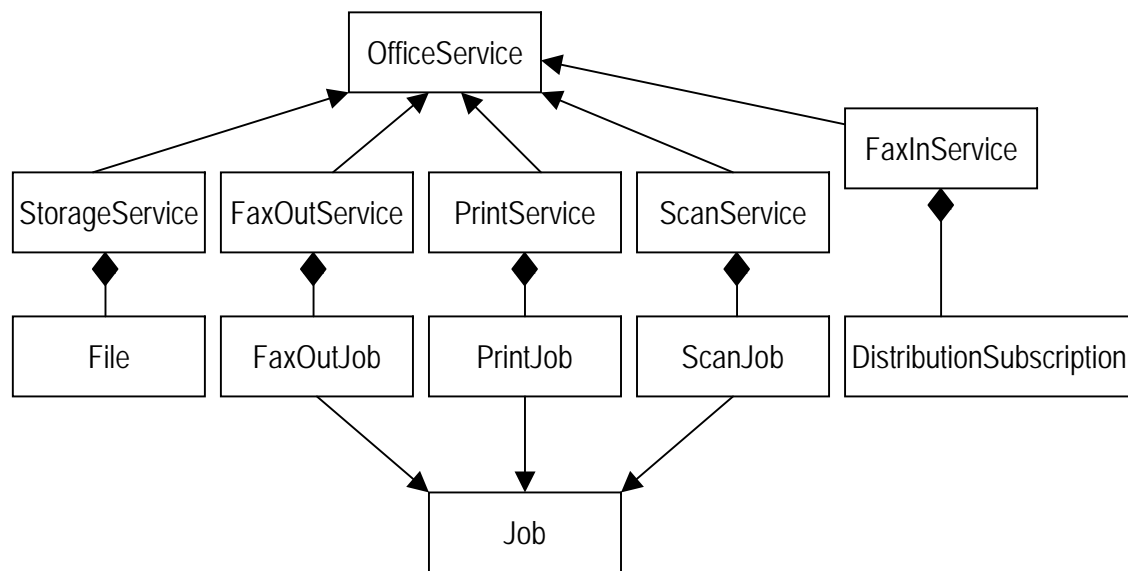

## Job/Device Control

- ◆ Available Technology
  - ◆ LPD, IPP, Port 9100 – Printing Only
- ◆ Need protocol to control Print, Scan, Storage, Fax-In, Fax-Out
- ◆ Need Notification
  
- ◆ Solution
  - ◆ Extend IPP model and semantics to support Scan, Storage, Fax
  - ◆ Use SOAP + HTTP

# Job/Device Control Model

# Data Format

- ◆ Available Technology
  - ◆ No defacto PDL in Japan
  - ◆ PS/PDF too complex/expensive/optional
- ◆ Need common data format for compatibility for Print/Scan/Storage
- ◆ Solution
  - ◆ TIFF
  - ◆ MH for B&W
  - ◆ Multi-page JPEG for Color

## UI Guideline

- ◆ **Scan-to-storage & Print-from-Storage require MFP panel operation**
  - ◆ Scan settings
  - ◆ Mail-to address or Storage destination & login info
- ◆ **Vendors design proprietary easy-to-use GUI**
  - ◆ Operation paradigm different among vendors
  - ◆ Users confused to operate different MFPs
- ◆ **Need similar UI design paradigm for ad hoc use**
- ◆ **Solution:**
  - ◆ **UI Guideline describes the common operation model**

# UI Guideline

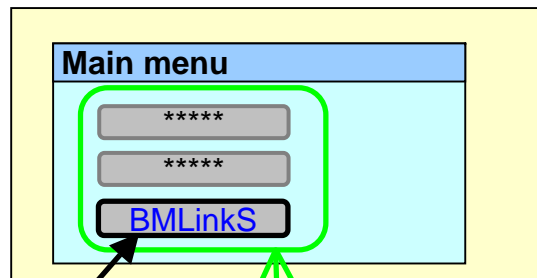

## Panel with hardware buttons

BMLinks button

Initial selection by hardware buttons

## Panel with software buttons

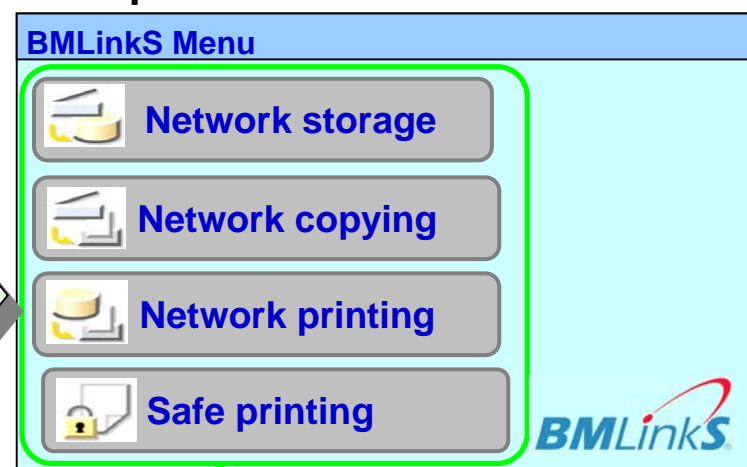

BMLinks button

Initial selection by software buttons

Press BMLinks button

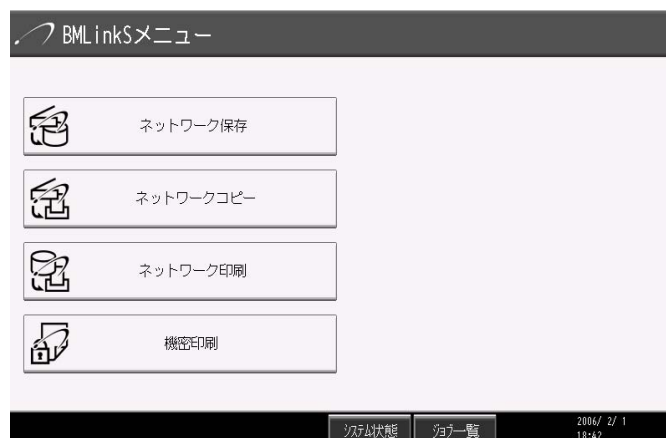

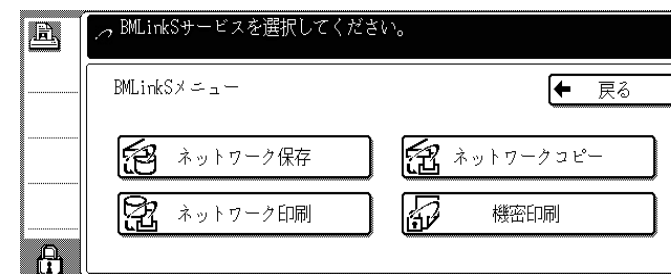

## Example of BMLinks menu screen

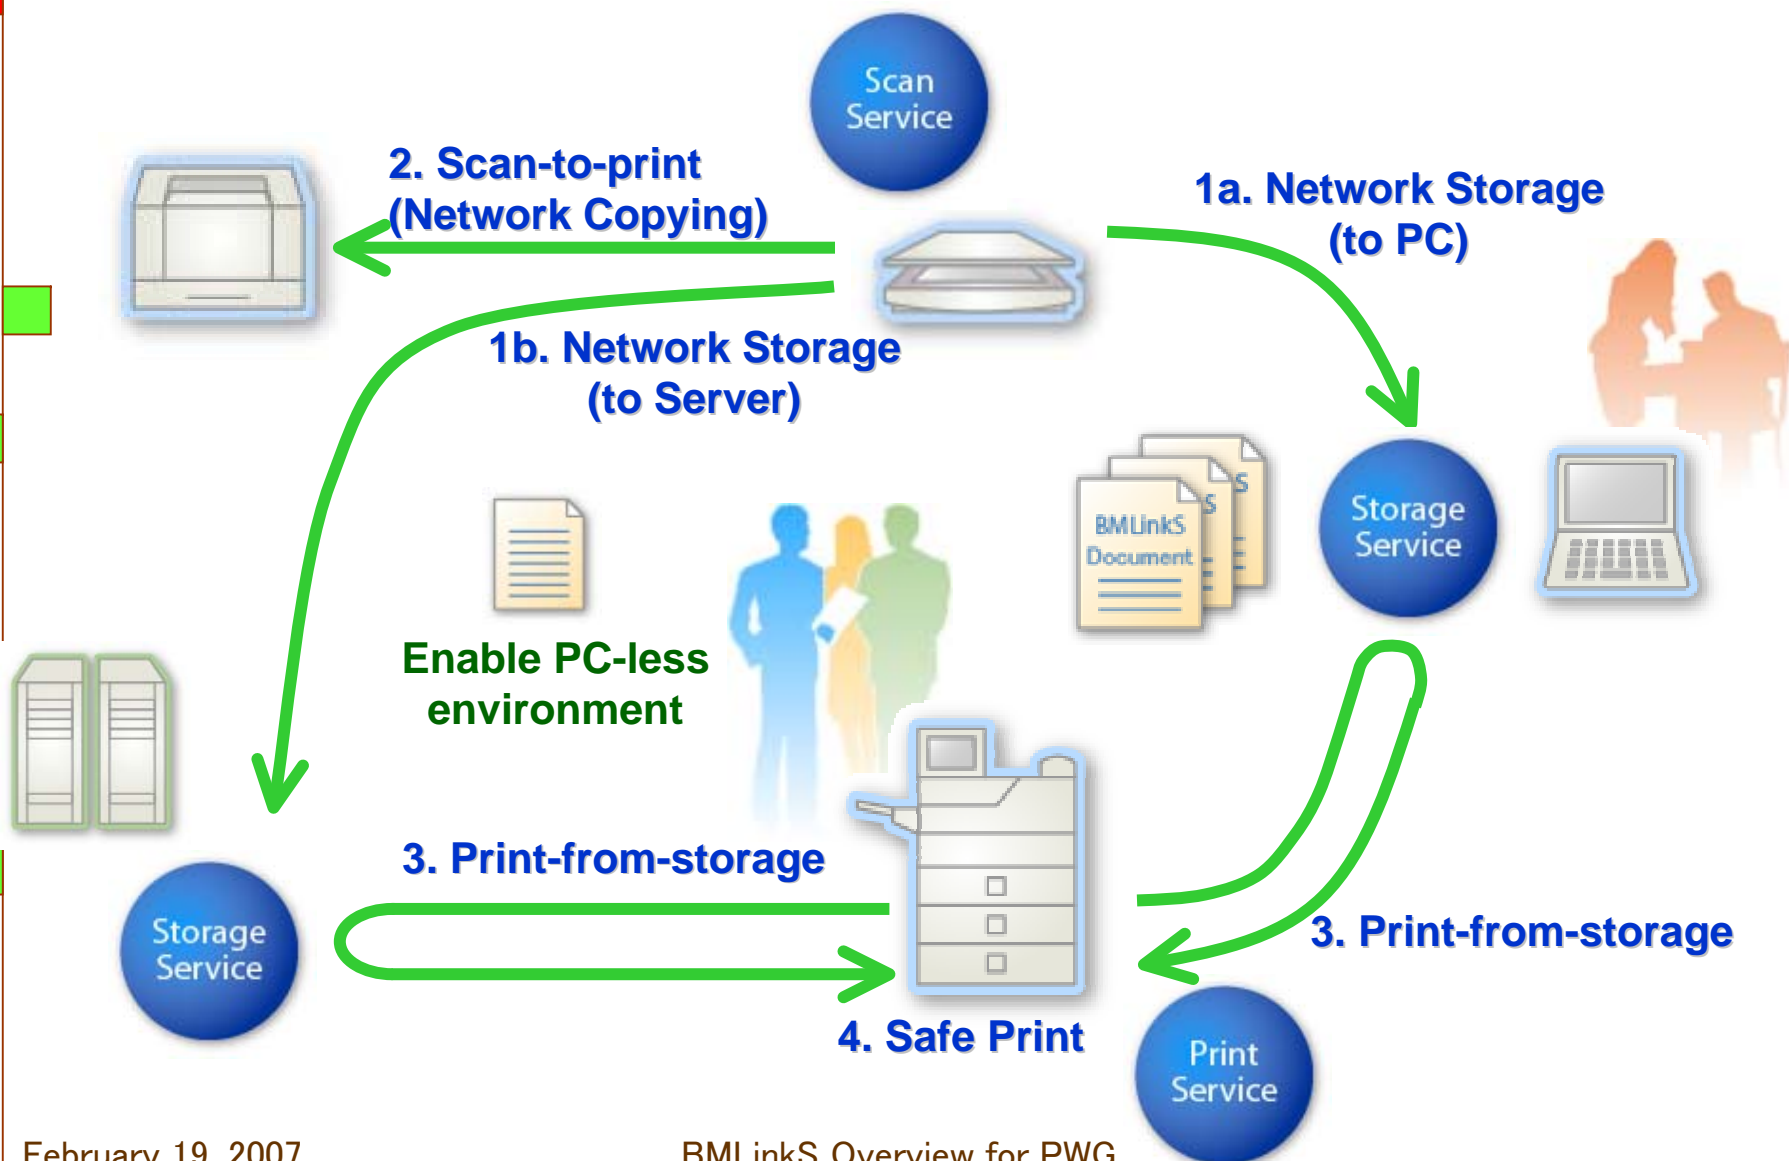

BMLinks function selections

Common operation flow of four basic functions defined by BMLinks

# UI Guideline Prototypes

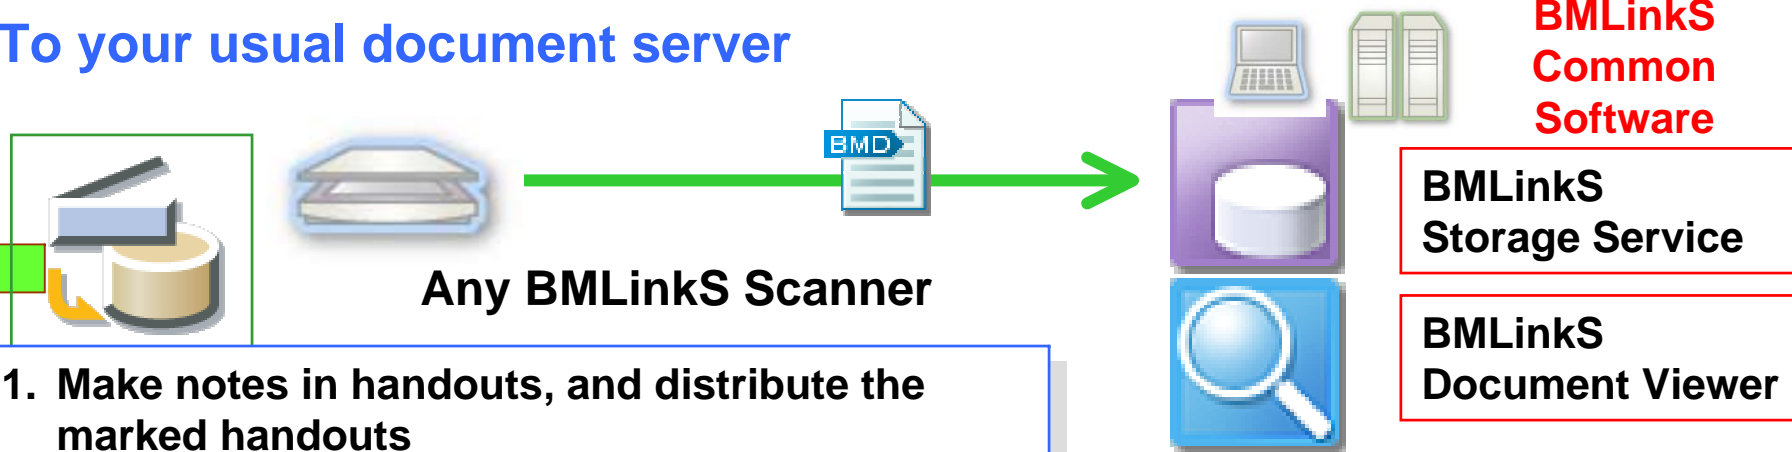

# Document Distribution Infrastructure

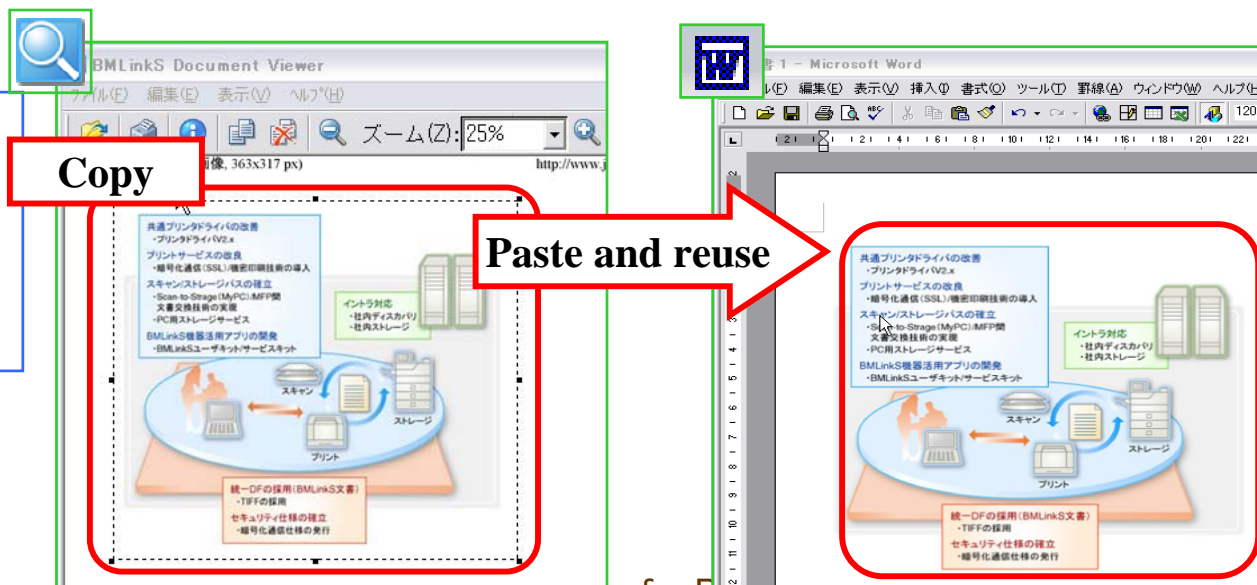

# Scan-to-Storage

To your usual document server

1. Make notes in handouts, and distribute the marked handouts

2. Reuse documents with Document Viewer

# Scan to Print (Network Copy)

In your everyday office

Any BMLinks Scanner

BMLinks-compliant printer from vendor A

BMLinks-compliant printer from vendor B

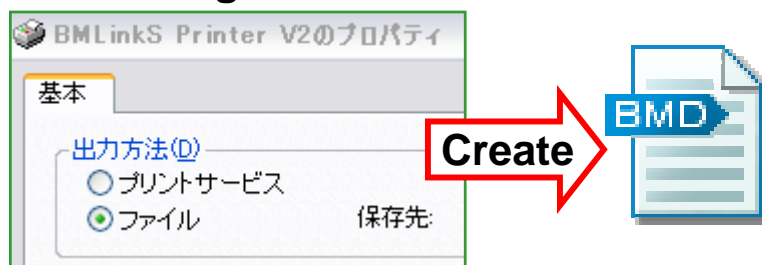

Replace

1. For large-volume printing, scan-to-print with the nearby high-speed printer.

2. Because of the common specifications among multiple vendors, printing is possible even after the device is replaced by a device from a different vendor.

# Print-from-Storage

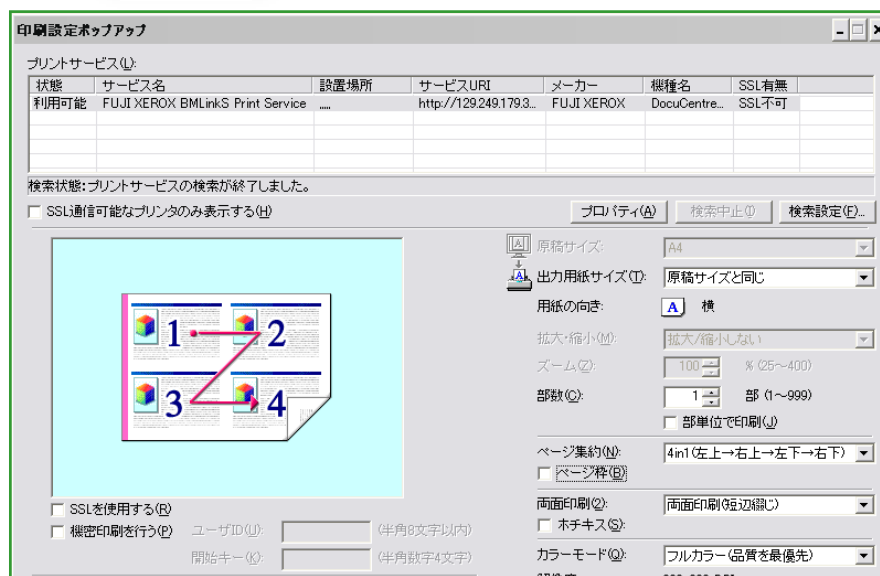

2. Just before the meeting, use nearby device to discover your Storage Service and print the handouts.

1. Create handouts and convert to a BMLinks Document using Printer Driver, and save in the Storage Service.

# Safe Print

When printing with printers in non-secure places

**1. Discover BMLinkS printers using Printer Driver**

**Safe Print function of BMLinkS printer**

**2. Use safe printing function to print documents only after you are at the printer**

## BMLinkS Certification

- ◆ Verify the interoperability of Office Services and Clients.
- ◆ Certification tools and specification available to the BMLinkS members
- ◆ Self Test – test and submit the test log
- ◆ Certified products can use the BMLinkS Logo

BMLinkS Logo

# Products

- ◆ Numerous BMLinkS-Ready devices support BMLinkS Printer
- ◆ MFPs supporting BMLinkS Scanner starting to hit market since November 2006
- ◆ Software distributed by BMLinkS Project
  - ◆ BMLinkS Printer Driver
  - ◆ Storage Service (PC-based)
  - ◆ BMLinkS Document Viewer

# Future

- ◆ **Discovery**
  - ◆ Currently limited to within the same segment
  - ◆ Support search/query mechanism for Intranet
- ◆ **Security**
  - ◆ Security Assessment
- ◆ **Data Format**
  - ◆ Add PDF support
- ◆ **Device Management**
- ◆ **Web Service (SOAP 1.2 support)**

# BMLinks Members

**Big Valley Co., Ltd.**  
**Brother Industries Ltd.**  
**Canon Inc.**  
**Casio Computer CO., LTD.**  
**Duplo Corporation**  
**Fujitsu Corporation**  
**Fuji Xerox Co., Ltd.**  
**Grape Systems Inc.**  
**Konica Minolta Business Technologies, INC.**  
**KYOCERA MITA CORPORATION**  
**Panasonic Communications Co., Ltd.**  
**Ricoh Co., Ltd.**  
**Riso Kagaku Corporation**  
**Seiko Epson Corporation**  
**Sharp Corporation**  
**Toshiba Tec Corporation**
