General Discussion

We discussed the strengthening alignment between DMTF and OASIS as it regards WS-CIM and WSDM. This bodes well for our decision to carry our semantic model (including WIMS counter semantics, eventually) into the CIM model. Harry will investigate ways that we might help imaging management become a showcase for WSDM via WS-CIM. Ira pointed out this would very likely involve creating a MUWS profile for imaging. Pete pointed out the value of this effort in leveraging our semantic model across multiple networking paradigms, thus lowering overall cost of development.

We reviewed the lasts revised draft of the WIMS protocol specification. Editorial changes were recorded by Bill Wagner on the fly. Within a week we expect this draft to be ready for w/g last call. PWG last call target will be December 8, to conclude at the January face to face per PWG process requirements.
